
Notice to shareholders of UBS (Lux) Investment SICAV

The Board of Directors of the Company wishes to inform you of the following changes in the Company's sales prospectus:

1. All references throughout the prospectus and SFDR annex have been changed from UBS ESG consensus score to UBS Blended ESG Score, and the following paragraph has been amended in relation to this:

The UBS Blended ESG Score is used to identify issuers/companies for the investment universe with strong environmental and social performance characteristics, or a strong sustainability profile. The UBS Blended ESG Score represents an average of normalized ESG assessment data from UBS and two recognized external ESG data providers, MSCI and Sustainalytics. This blended score approach enhances the quality of the derived sustainability profile by integrating multiple independent ESG assessments, rather than depending solely on one single view. The UBS Blended ESG Score represents an entity's sustainability profile assessing material environmental, social, and governance factors. These factors may include, but are not limited to, environmental footprint and operational efficiency, risk management, climate change response, natural resource utilization, pollution and waste management, employment standards, supply chain oversight, human capital development, board diversity, occupational health and safety, product safety, and anti-fraud and anti-corruption policies. Each assessed entity is assigned a UBS Blended ESG Score, which ranges from 0 to 10, with 10 indicating the best sustainability profile.

This UBS ESG consensus score is a normalized weighted average of ESG score data from internal and recognized external providers. Rather than relying on an ESG score from a single provider, the consensus score approach increases conviction in the validity of the sustainability profile.

The UBS ESG consensus score assesses sustainability factors, such as the performance of the relevant issuers/companies with reference to environmental, social and governance (ESG) aspects. These ESG aspects relate to the main areas in which the issuers/companies operate and their effectiveness in managing ESG risks. Environmental and social factors can include (amongst others) the following: environmental footprint and operational efficiency, environmental risk management, climate change, natural resource usage, pollution and waste management, employment standards and supply chain monitoring, human capital, diversity within the board of directors, occupational health and safety, product safety, as well as anti-fraud and anti-corruption guidelines.

The changes shall enter into force on 4 March 2025. The amendments shall be visible in the Company's Sales Prospectus.
