Investment Strategy

DJE - Asien invests primarily in solid companies with promising growth prospects in the Asia-Pacific region. The fund management seeks to identify investments with attractive valuations and shareholder-friendly corporate policies such as capital returns and share buybacks (total shareholder return). The fund allocation is independent of market benchmark and uses decades of experience and in-depth Asian expertise of the DJE research team to deliver a positive performance.

The Funds are actively managed by DJE and, where a benchmark index is indicated, without reference to it. The presented charts and tables concerning performance are based on our own calculations according to the gross performance (BVI) method² and illustrate past development. Past performance is not indicative for future returns. The BVI method takes into account all costs incurred at the fund level (e.g. management fees), the net performance and the issue fee. Additional individual costs may be incurred at the customer level (e.g. custodian fees, commission and other charges). Model calculation (net): an investor wishes to purchase shares for Euro 1,000. With a maximum issue surcharge of 0.00% , he has to spend a one-off amount of Euro 0.00 when making the purchase. In addition, there may be custodian costs that reduce performance. The custodian costs are decided by your bank's price list and service charges

ESG Rating What it means

AAA, AA	Leader: The companies that the fund invests in show strong and/or improving management of financially relevant environmental, social and governance issues. These companies may be more resilient to disruptions arising from ESG events.
A, BBB, BB	Average: The fund invests in companies that show average management of ESG issues, or in a mix of companies with both above-average and below-average ESG risk management.
B, CCC	Laggard: The fund is exposed to companies that do not demonstrate adequate management of the ESG risks that they face, or show worsening management of these issues. These companies may be more vulnerable to disruptions arising from ESG events.
Not Rated	Companies in the fund's portfolio that are not yet rated by MSCI, but these are rated as part of our own analysis.

Investment Approach

DJE - Asien invests primarily in companies with attractive and promising business models from the Asia-Pacific region. The RCEP (Regional Comprehensive Economic Partnership) free trade zone, which was established in 2020, is the largest in the world in terms of its share of global GDP and is expected to contribute to the region's dynamic growth (see chart). The fund's allocation is based on our proprietary, fundamental, top-down (FMM methodology) and bottom-up analysis. We believe that the combination of global macroeconomic analysis along with bottom-up security selection is essential to balance opportunities and risks. The focus of the fund is companies with attractive revenue and earnings growth, stable earnings, potential for innovation and a leading competitive position. The fund management allocates across regions, countries, and sectors of the Asian economic area, independent from any market benchmarks.

Opportunities

- + Excellent demographic developments make long-term growth in investments in Asia possible
- + The conditions for expansion in many Asian domestic economies, such as China, continue to exist
- + Traditionally higher dividend payments mean that the fund can take advantage of the compounding effect of reinvested dividends

Risks

- Equity prices may exhibit relatively strong fluctuations depending on market conditions
- Currency risks resulting from a high proportion of foreign investments
- Issuer country and credit risks

Monthly Commentary

The majority of Asian stock markets performed negatively in October, especially in China and India. China's economy grew by 4.6% year-on-year in the third quarter and by 0.9% quarter-on-quarter. In China, however, the official purchasing managers' indices have recently risen, with the manufacturing index in particular rising above the 50 point mark for the first time since April, at 50.1. This could indicate that monetary and economic policy measures are slowly starting to take effect. Data on industrial production and retail sales have improved slightly. However, domestic demand remains weak.
