Investment Strategy

The DJE - Gold & Ressourcen is a thematic global equity fund. The concentrated portfolio of 50-70 stocks focuses on companies in the mining, processing and marketing of gold. Equities from the broader commodities universe, such as diversified mining companies, non-ferrous metals, oil and gas, can also be added for further diversification. The investment strategy is completely independent from any benchmark requirements and the share of gold mining stocks can vary between 30 and 100%. With gold as the investment focus, the fund offers diversification and a lower correlation to traditional investment strategies.

The Funds are actively managed by DJE and, where a benchmark index is indicated, without reference to it. The presented charts and tables concerning performance are based on our own calculations according to the gross performance (BVI) method² and illustrate past development. Past performance is not indicative for future returns. The BVI method takes into account all costs incurred at the fund level (e.g. management fees), the net performance and the issue fee. Additional individual costs may be incurred at the customer level (e.g. custodian fees, commission and other charges). Model calculation (net): an investor wishes to purchase shares for Euro 1,000. With a maximum issue surcharge of 5.00%, he has to spend a one-off amount of Euro 50.00 when making the purchase. In addition, there may be custodian costs that reduce performance. The custodian costs are decided by your bank's price list and service charges

Opportunities in precious metals and commodity markets

Evaluation by MSCI ESG Research

MSCI ESG Rating (AAA-CCC)	AA
ESG Quality Score (0-10)	7.5
Environmental score (0-10)	4.3
Social score (0-10)	5.9
Governance score (0-10)	6.7
ESG Rating compared to Peer Group (100% = best value)	93.79%
Peer Group	Equity Sector Materials (145 Funds)
ESG Coverage	100.00%
Weighted Average Carbon Intensity (tCO ₂ e / \$M sales)	420.61

AAA	2.70%	BB	0.00%
AA	65.05%	B	0.00%
A	23.14%	CCC	0.00%
BBB	9.11%	Not Rated	0.00%

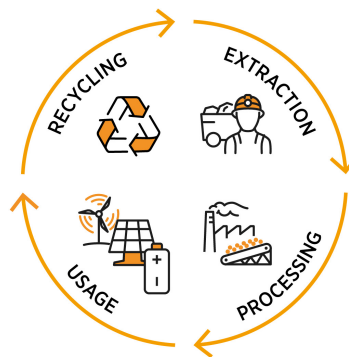

ESG Rating What it means

AAA, AA	Leader: The companies that the fund invests in show strong and/or improving management of financially relevant environmental, social and governance issues. These companies may be more resilient to disruptions arising from ESG events.
A, BBB, BB	Average: The fund invests in companies that show average management of ESG issues, or in a mix of companies with both above-average and below-average ESG risk management.
B, CCC	Laggard: The fund is exposed to companies that do not demonstrate adequate management of the ESG risks that they face, or show worsening management of these issues. These companies may be more vulnerable to disruptions arising from ESG events.
Not Rated	Companies in the fund's portfolio that are not yet rated by MSCI, but these are rated as part of our own analysis.

Investment Approach

The thematic and globally investing equity fund focuses on gold and precious metals, diversified commodity groups, base metal producers, chemical companies and oil & gas producers. The fund pursues a bottom-up approach with high-quality stock selection, focusing on the fundamental key financial indicators of the companies. We invest primarily in gold producers with a competitive cost structure that generate free cash flows even at lower gold prices. In general, negative or falling real interest rates are positive for tangible assets, particularly gold. Demand for gold is likely to rise if real interest rates are low or fall.

Investing in the complete cycle

Source: DJE Kapital AG. For illustrative purposes only.

Opportunities

- + In the long term, high upside potential for stocks of the gold and commodity sector
- + Exchange rate gains in global investments are possible
- + Increasing demand for physical gold due to declining confidence in established currencies and high demand from the emerging market jewellery sector; this should lead to higher gold prices and thus to higher prices for gold mining stocks

Risks

- Shares in the commodity and precious metals sector are generally more volatile than the overall market
- Currency risks resulting from a high proportion of foreign investments
- In addition to market price risks (equity and currency risks), there are country and credit risks

Fund Manager

Stefan Breintner

Responsible Since 30/06/2008

Stefan Breintner is Head of Research & Portfolio Management and, as an analyst, is responsible for the basic materials, chemicals, energy and construction & materials sectors. Since 2019, he has also been co-fund manager of DJE's dividend strategies. The business economist has been with DJE since 2005.

DJE Kapital AG

DJE Kapital AG is part of the DJE Group, can draw on around 50 years of experience in asset management and is today one of the leading bank-independent financial service providers in German-speaking Europe. Our investment strategy, both in equities and bonds, is based on the FMM method developed in-house: a systematic analysis which takes three views on securities and the financial markets – fundamental, monetary and market-technical. DJE follows sustainability criteria when selecting securities, takes into account selected sustainable development goals, avoids or reduces adverse sustainability impacts and is a signatory to the United Nations "Principles for Responsible Investment".

Monthly Commentary

The DJE - Gold & Ressourcen rose by 0.42% in May. The XAU gold mining index rose by 8.94% in US dollar terms and by 7.26% in euro terms due to the depreciating US dollar. Gold mining shares thus outperformed the gold price itself, which rose by 1.80% in USD terms to 2,327.33 per troy ounce. In euro terms, the troy ounce rose by 0.13% to 2,147.48 euros. Towards the middle of the month, the price of gold had reached a record high of USD 2,450 per troy ounce as hopes of an interest rate cut in the USA strengthened on the back of lower inflation data. However, gold subsequently gave back some of its gains when stronger-than-expected US economic data and hawkish comments from the US Federal Reserve argued against interest rate cuts. The published minutes of the Federal Open Market Committee (FOMC) indicated that the current higher interest rates of 5.25% to 5.50% could be maintained for longer than expected. As a result, market expectations for the first interest rate cut were postponed by 25 basis points until December. Gold was greatly supported by central banks' gold purchases, which also increased in the first quarter of 2024. Further support for the gold price came from China: Chinese households have also been buying more gold again for some time, primarily as protection against a possible further devaluation of the Chinese currency. The highest positive performance contributions in May came from the positions of the two gold mining companies Kinross Gold and Agnico Eagle Mines as well as the uranium producer Cameco - all three companies from Canada. In contrast, the performance was negatively impacted by the positions in the German-American industrial gases manufacturer Linde, the British mining company Anglo American and the South African gold mining company Gold Fields, among others. The weighting of gold mining stocks was over 51% in the reporting period, which corresponds to an increase compared to the previous month (over 49%). The focus remains on solidly financed producers that generate positive free cash flows even at lower gold prices and also have some growth prospects. Broad-based commodity/chemical stocks generally underperformed gold mining stocks in May: the MSCI World Materials index rose by +1.48% and the CRB commodity index fell by -1.99% - both index figures in euro terms.
