#### Strategy

#### The objective is to outperform through active management the FTSE Global Focus Index, currency hedged against the share class currency, over the period of a market cycle, net of expenses. The fund invests globally in hybrid convertible bonds issued by sustainable companies. Hybrid convertible bonds have optimal opportunity/risk profiles and benefit when share prices rise. At the same time, they offer effective capital protection against price setbacks. The ESG objectives are to be achieved by using exclusion criteria, a best-ofclass/best-in-class approach and ESG integration.

### **Key Factors**

- Global convertible bonds of sustainable companies
- Double protection thanks to asymmetry and sustainability
- Convertible bonds specialist with long term track record
- Experienced team, comprising 6 convertible bond portfolio managers and 17 analysts from research provider I-CV
- Foreign currency investments are hedged against the fluctuations of the fund's reference currency

The Summary Risk Indicator (SRI) assumes you keep the product for a minimum of 5 years.

Past performance is not an indicator of future performance and current or future trends. The performance values refer to the net asset value and are calculated without the commission and costs incurred on issue, redemption or swapping (e.g. transaction and custody costs of the investor). The fund does not include the security of capital which is characteristic of a deposit with a bank or building society. The indications are based on figures denominated in the fund currency. If this currency is different from the currency of the country in which the investor is resident, the return may decrease as a result of currency increase or fluctuations.

#### Glossary

Duration: a risk indicator that measures the sensitivity of the price of a bond issue or a portfolio of bond issues to a change in interest rates. Ongoing charge: the ongoing charge is a measure of the annual expenses incurred by a fund and is expressed as a percentage. It allows an accurate comparison of the costs of funds from different companies to be made. Sharpe ratio: the Sharpe ratio (risk-adjusted performance) is generated by calculating the difference between the average annualised return and the risk-free return. The resulting figure is divided by the annualised standard deviation of the returns. The higher the Sharpe ratio, the better the fund performance in relation to the risk potential of its portfolio. Tracking error: the tracking error measures the divergence between the return of a fund in relation to its benchmark. Volatility: a risk indicator demonstrating the fluctuation range (for example of the price or return of a security or fund unit) over a defined period; volatility is most often calculated using standard deviation. The higher the volatility, the greater the fluctuation range. Yield to worst: lowest possible yield that can be received on a bond that fully operates within the terms of its contract without defaulting.
