Lazard Rathmore Alternative Fund

A Acc USD Share Class | IE00BG1V1444

A sub-fund of Lazard Global Investment Funds, an Irish UCITS investment fund company

This is a marketing communication. This is not a contractually binding document. Please refer to the prospectus of the UCITS and to the PRIIPs KID before making any final investment decisions.

Fund Description

Lazard Rathmore Alternative Fund is a hedged convertibles portfolio, best described as convertible arbitrage, where typically a long convertible bond position is hedged with a short stock position in the same company. Position-level hedges are actively traded in order to monetize market volatility. In addition to generating returns from credit and volatility ("betas"), the team's specialized approach focuses on extracting value from special situations and events ("alpha"), which supplements the traditional drivers of return to convertible arbitrage strategies and allows for a strategic, long-term approach to investing in the space.

Risk Rating

Key Risks Related to the Fund

There is no capital guarantee or protection of the value of the Fund. The value of your investment and the income from it can go down as well as up and you may not get back the amount you originally invested.

While the Fund may seek to profit from the prices of shares falling (i.e. taking short positions or shorting) as well as rising in value through the use of FDI, it is possible for the Fund to lose value on both the long and short positions, thereby increasing the risk of the Fund.

There are additional risks relating to the use of derivatives - the Fund invests in derivatives for the purposes of reducing exposure (hedging), gaining greater exposure, and speculating in the value of underlying investments. The use of derivatives to gain greater exposure to investments rather than by direct investment can increase the possibility for profit but also increase the risk of loss.

Key Risks Related to the Share Class

Shareholders who acquire shares after commencement of a performance period may be liable for a performance fee, even where there has not been an appreciation of performance of the relevant share class during the period in which those shares were actually held. Performance fees may be paid on unrealised gains which may subsequently never be realised.

The returns from your investment may be affected by changes in the exchange rate between the Fund's base currency, the currency of the Fund's investments, your share class and your home currency.

See "Risk Factors" in the UCITS' Prospectus and Fund Supplement for more information about risks.

This Fund is actively managed. The Fund's performance is measured against the performance of any one or more of the HFRX Relative Value Fixed Income Convertible Arbitrage Index, S&P 500 Index, Russell 2000 Index, Bloomberg US Agg Total Return Value Unhedged USD, ICE BofA Global 300 Convertible Index, ICE BofA US High Yield Index and MSCI World Index (the "Benchmark"), which the Investment Manager has assessed to be the most appropriate Benchmark for measuring performance. The Fund is not constrained by the Benchmark as it has flexibility to invest in securities and asset classes not included in the Benchmark.

Commentary

Market Review

July highlights included gains in selected equity markets, rates, credit, and the convertible market broadly, despite lost momentum in large cap technology stocks. Elevated equity valuations, mixed second quarter earnings, weaker than forecasted economic data, and questions regarding Al valuations, lead to an increase in intra-month equity volatility. The Federal Reserve kept interest rates unchanged at its July meeting, but dovish commentary from Chairman Powell suggested a September cut was forthcoming. While second quarter earnings results were broadly better than expected, some companies and analysts flagged potential weakness in second half results.

The Nasdaq Composite declined -5.6% from its intra-month high, and was down -0.73% for the month. Other segments of the equity market posted positive returns for July, with the S&P 500 Index returning +1.22%. Among the strongest parts of the market were smalland-mid cap stocks, as measured by the Russell 2000 Index, which rose +10.16% and value stocks (as measured by the Vanguard Value ETF) which gained +4.74% in July. Reflecting the sharp moves in the equities at times, volatility rose significantly, with the VIX rising 32% to 16.36 from the prior month end's level of 12.44, its highest reading in three months.

Treasury yields declined as investors began anticipating that the Federal Reserve would begin cutting its benchmark Federal Funds Target rate beginning in September. The 2-year Treasury rate declined 49 basis points to 4.26%. The 5-year and 10-year rates declined by 47 basis points and 37 basis points, respectively. Despite the move in rates, interest rate volatility, as measured by the ICE BofA MOVE Index, was relatively stable month-over-month. The ICE BofA MOVE Index closed at 99.41 compared to 98.59 at the end of June. In the US High Yield market, conditions remained relatively stable as measured by the ICE BofAML US High Yield Index, with credit spreads widening modestly to 325 bps points, +4 bps from the prior month end level.

The convertible basis improved for the month of July. Most profiles improved over the course of the month, except for the lowest priced convertibles. Gains were helped by sharply lower interest rates and higher stock volatility.

Total global convertible issuance amounted to \$8.6 billion for the month, up +150% year-over-year. New issuance for the year through July totaled \$69 billion, +61% growth compared to the prior year's comparable period. Asian new issuance was especially robust. Notable new deals out of Asia included a \$3.5 billion Ping An 0.875% offering and a ¥100 billion offering from SBI Holdings 0%. Other significant new deals included the \$1 billion Welltower 3.125% offering in the US and the €487 million TUI AG 1.95% convertible in Europe.

Portfolio Review

Amongst the largest contributors to returns for the month was the Maxeon Technologies (MAXN) complex, which improved following a balance sheet recapitalization. The Gol Linhas Aereas Inteligentes S.A (GOL)/ABRA complex also improved.

Detracting from returns was the Cathay Pacific Airways 2.75% (293 HK) bond, which declined owing to lower stock volatility and a modest increase in funding costs. The Natera (NTRA) 2.25% and Okta (OKTA) 2.875% bonds were small detractors for the month as well.

Outlook

With the Federal Reserve poised to cut interest rates in September, the convertible market should benefit from lower funding costs and duration. The Team expects single stock and market volatility to increase in the coming quarters as well, from historically low levels. In addition, issuers continue to show strong interest in preemptive refinancings, recognizing the growing variability of rates, credit spreads, and equity valuations in the face of slowing economic activity.

Fund Information

Fund Objective†	The investment objective of the Fund is to seek to achieve absolute returns through a combination of capital appreciation and income over a three year market cycle.

Glossary

1 Statistics are based on unaudited and unreconciled information calculated by the risk team as of 31 July 2024 taking into account month-end redemptions. Allocations are subject to change.

2 Vega exposure is measured as a 1 volatility point change in the

implied volatility of the investments. The result is quoted as a percentage of NAV.

3 Rho is measured as the percentage change in NAV for a 10 bp change in interest rates.

4 CS01 is calculated as loss/gain for the strategy if the credit spreads widen by one basis point. The strategy's position in every issuer is considered net of the long and short positions in that issuer and aggregated across the entire portfolio.

5 Duration is the sensitivity of the bond price to a change in interest rates.

6 A trading strategy reflects a particular investment thesis. For example, a "credit short dated gamma" strategy is one in which the strategy is long a

short-dated convertible bond with a positive gamma profile and simultaneously short the underlying equity of the same issuer. The number

of trading strategies shown represent 90% of the strategy's Long Market Value. Incubated strategies account for the remaining 10% of the strategy's Long Market Value.

7 YTP/ YTM refers to Yield to Put or Yield to Maturity, excluding securities with default/ distressed status, imminent corporate actions, and bonds trading with negative yields (otherwise defined as volatility trades).

8 Carry is the current yield of the strategy net of financing and stock rebates represented % of capital.

9 Average Implied Credit Spread is the credit spread of a bond over

LIBOR, taking into account the value of the embedded option. 10 Gamma represents the rate of change in a convertible's delta per 1% move

in the underlying stock. Options used for hedging purposes are not included in the gamma calculation.

Settlement	
Subscriptions Settlement	T+3
Redemptions Settlement	T+3
Dealing Frequency	You can buy and sell your shares in the Fund on any day on which the stock exchange in New York is open for business.
Cut-off Time (Subscriptions)	12:00 T-0 IE Dublin
Cut-off Time (Redemptions)	12:00 T-5 IE Dublin
Fees	
Annual Management Fee	1.25%
Performance Fee	20% of the net gain, if any, over a hurdle rate capped at 5% per year and over a high water mark.
Performance Fee Last Calendar Year	0.00%
Ongoing charges	1.34%
Max Subscription Fee	3.00%
Max Redemption Fee	2.00%
Minimum Investment Amount	1 000 000 USD
Swing Pricing	Not Applicable

11 Delta represents the sensitivity of convertible bonds held in the portfolio to a change in the underlying stock price.

12 Based on LMV of each position as a % of total LMV, and absolute NMV of each position as a % of total NMV.

13 The securities identified should not be considered a recommendation or solicitation to purchase or sell these securities. It should not be assumed that any investment in these securities was, or will be, profitable. There is no assurance that any securities discussed herein will remain in the

portfolio. These securities do not represent the entire portfolio of an account managed pursuant to the strategy and in the aggregate may represent only a small percentage of an account's portfolio holdings.

14 Geographic compositions is calculated as % of NMV and is based on issuer/ parent country exposure. North America includes USA and Canada. 15 Jump-to-Default is calculated by dividing the portfolio's net market value by its long market value.

16 Premium is the amount by which the convertible bond price exceeds the current market value of the common stock into which it may be converted. 17 Average Bond Price is the weighted average bond price of the convertible bonds held in the portfolio.

The **Ongoing Charges** represent the ongoing costs to the fund from one year to the next which includes but is not limited to the fund's annual management fees, professional fees, audit fees, custody fees and custody transaction fees. It does not include any performance fee or portfolio transaction costs incurred buying or selling assets for the fund. The Ongoing charges may vary from year to year.

The **Risk Rating** is calculated in line with PRIIPs Regulation 2014 (the "PRIIPs Regulations").
