52 Week Low	CHF	192.87	
Total Assets in mn	CHF	13.22	(all classes of the fund)
Number of Shares		36'828	

Investment Objective and Investment Policy

The Quantex Nebenwerte Fonds Schweiz aims for a return above average with investments in undervalued shares of small and mid-sized companies domiciled in Switzerland. A lower volatility of the fund shall be achieved through a stake of up to 30% in Swiss OTC stocks not traded at an organized and regulated market.

Characteristics

The investment fund is suitable for long term investors who seek capital gains, have an investment horizon of at least five years and are able to bear price fluctuations. The investment fund is suitable as an addition to a broadly diversified equity portfolio.

Investment Manager's Comment

Weak US economic figures and a surprising interest rate increase by the Bank of Japan, which triggered the closure of so-called yen carry trades, caused sharp price losses on the stock markets at the beginning of August. However, the slump did not last long; most indices were even able to close slightly higher by the end of the month.

Numerous companies held in the fund published half-year figures. While **Accelleron**, **BKW**, **Huber+Suhner** and **Siegfried** were able to exceed expectations, **Tecan Group** figures were disappointing. However, we had expected this and reduced the position before the publication.

In addition to some weighting adjustments, we have built up new positions in **Galenica** and **HIAG Immobilien Holding**. We see a lot of pessimism in the latter and classify the valuation discount compared to comparable companies as excessive. **Phoenix Mecano** was sold in its entirety.
