52 Week Low	CHF	192.87	
Total Assets in mn	CHF	11.93	(all classes of the fund)
Number of Shares		33'999	

Investment Objective and Investment Policy

The Quantex Nebenwerte Fonds Schweiz aims for a return above average within investments in undervalued shares of small and mid-sized companies domiciled in Switzerland. A lower volatility of the fund shall be achieved through a stake of up to 30% in Swiss OTC stocks not traded at an organized and regulated market.

Characteristics

The investment fund is suitable for long term investors who seek capital gains, have an investment horizon of at least five years and are able to bear price fluctuations. The investment fund is suitable as an addition to a broadly diversified equity portfolio.

Investment Manager's Comment

With the exception of the Mid Caps segment, all Swiss stock indices recorded losses in September. Stocks traded over the counter lost an above-average amount. The interest rate cuts by the major central banks and the monetary easing measures in China had a supporting effect.

The half-yearly reporting was coming to an end. The figures presented by the listed companies **Burkhalter Holding AG**, **Medacta Group** and **R&S Group Holding AG** met our expectations, while **Romande Energie** disappointed. The position was reduced accordingly.

BACHEM HOLDING AG was added again to the portfolio after the price collapse in the last few weeks. We took advantage of disproportionate price developments in some stocks to take partial profits.
