Number of Shares		16'250

Investment Objective and Investment Policy

The Quantex Nebenwerte Fonds Schweiz aims for a return above average with investments in undervalued shares of small and mid-sized companies domiciled in Switzerland. A lower volatility of the fund shall be achieved through a stake of up to 30% in Swiss OTC stocks not traded at an organized and regulated market.

Characteristics

The investment fund is suitable for long term investors who seek capital gains, have an investment horizon of at least five years and are able to bear price fluctuations. The investment fund is suitable as an addition to a broadly diversified equity portfolio.

Investment Manager's Comment

Global stock markets corrected in October, influenced by rather subdued corporate quarterly reports and the outlook provided therein. The significant rise in interest rates over the course of the month also had an impact on valuations. The uncertain outcome of the upcoming elections in America also had a negative impact.

Among others, **Cicor**, **Huber+Suhner** and **Bucher Industries** reported on the course of business. While the first two mentioned were able to meet expectations, Bucher's numbers were slightly disappointing.

Some adjustments were made to the portfolio to reduce cyclicality. The exorbitant price gains in **R&S Group** since the beginning of the year prompted us to sell the position completely.

Net Asset Value in CHF
