HIGHLIGHTS

LO Funds (CH) - Swiss Franc Bond is an actively managed portfolio. Its long-only fixed income strategy has been in place since June 2nd 2008. It invests mainly in bonds issued by Swiss and foreign public and private issuers, denominated in Swiss francs. It seeks to outperform the SBI Global AAA-BBB® index (registered trademark of SIX Swiss Exchange AG) over the long-term. The investment approach focuses on several sources of performance including the active management of duration, the positioning on the interest rate curve, the allocation between government bonds and credit, the sectorial and geographical allocation as well as the issuers and issues selection. The selection process is backed by robust internal research and combines top-down allocation decisions, complemented by a bottom-up bond selection. Risk management is performed by fund managers, alongside independent teams who manage investment risks and monitor operational risks.

The following risks may be materially relevant but may not always be adequately captured by the synthetic risk indicator and may cause additional loss:

Credit risk: A significant level of investment in debt securities or risky securities implies that the risk of, or actual, default may have a material impact on performance. The likelihood of this depends on the credit-worthiness of the issuers.

Liquidity risk: Where a significant level of investment is made in financial instruments that may under certain circumstances have a relatively low level of liquidity, there is a material risk that the fund will not be able to transact at advantageous times or prices. This could reduce the fund's returns.

Risks linked to the use of derivatives and financial techniques: Derivatives and other financial techniques used substantially to obtain, increase or reduce exposure to assets may be difficult to value, may generate leverage, and may not yield the anticipated results. All of this could be detrimental to fund performance.

Concentration risk: To the extent that the fund's investments are concentrated in a particular country, market, industry, sector or asset class, the fund may be susceptible to loss due to adverse occurrences affecting that country, market, industry, sector or asset class.

Before taking any investment decision, please read the latest version of the prospectus, the articles of incorporation, the Key Information Documents (KIDs) and the latest annual report and semi-annual report. Please pay attention to the Appendix B "Risk Factors Annex" of the prospectus.

Incorporation of extra-financial risks into the investment decision process may result in underweighting of profitable investments from the sub-fund's investment universe and may also lead the management of the sub-fund to underweight investments that will continue to perform. Sustainability risks may lead to a significant deterioration in the financial profile, profitability or reputation of an underlying investment and may therefore have a significant impact on its market price or liquidity.

GLOSSARY

Credit Ratings: The credit ratings breakdown mentioned for convertible funds is a blend of ratings performed internally as well as ratings provided by external sources.

Risk and Reward Profile: This summary risk indicator (SRI) is a guide to the level of risk of this product compared to other products. Where there are less than 5 years worth of data, missing returns are simulated using an appropriate benchmark. The SRI may change over time and should not be used as an indicator of future risk or returns. Even the lowest risk classification does not imply that the Sub-Fund is risk-free or that capital is necessarily guaranteed or protected.

Total Expense Ratio (TER): The total fees involved in managing and operating a fund. The TER included the annual management fee and other charges, for example legal, admin, and audit costs (source: annual audited reports or semi annual non audited reports). The Total Expense Ratio (TER) is calculated twice per year and is subject to change between calculation dates.

OGC: The OGC (Ongoing Charge) refers to the recurring charges levied on the assets of a fund in the context of PRIIP KIDs. These charges include all expenses necessary for the operation of the fund, such as manager remuneration, depository fees, accounting and audit costs, as well as other administrative costs. However, they exclude certain costs such as entry and exit fees, performance fees.

Volatility: A statistical measure of the fluctuations of a security's price. It can also be used to describe fluctuations in a particular market. High volatility is an indication of higher risk.

Sharpe Ratio: A measure of risk-adjusted performance. The higher the ratio, the better risk-adjusted performance has been.

Drawdown: A draw down is usually quoted as the percentage between the peak and trough of an investment during a specific period. It can help to compare an investment's possible reward to its risk.

Correlation: Correlation is a measure of how securities or asset classes move in relation to each other. Highly correlated investments tend to move up and down together while investments with low correlation tend to perform in different ways in different market

Tracking Error: A measure of how closely an investment portfolio follows the index against which it is benchmarked.

Bond Floor: The lowest value that convertible bonds can fall to, given the present value of the remaining future cash flows and principal repayment. The bond floor is the value at which the convertible option becomes worthless because the underlying stock price has fallen substantially below the conversion value.

Delta: The ratio comparing the change in the price of the underlying asset to the corresponding change in the price of a derivative.

Premium: If a fixed-income security (bond) is purchased at a premium, existing interest rates are lower than the coupon rate. Investors pay a premium for an investment that will return an amount greater than existing interest rates.

Yield to Maturity: The rate of return anticipated on a bond if it is held until the maturity date.

Coupon: The interest rate stated on a bond when it's issued.

Modified Duration: This formula is used to determine the effect that a 100-basis-point (1%) change in interest rates will have on the price of a bond.

Average Duration: The average modified duration of the portfolio expressed in years.

Expected Loss: Annual average expected loss to the portfolio expressed in percent.

Attachment Point: The modelled probability of a negative portfolio return in any given year.

Flat Fee: It cover the Operational Costs directly incurred by the Company ("Direct Costs") and those resulting from the activities carried out by the Management Company on behalf of the Company ("Fund Servicing Costs").

Morningstar stars: The star rating is based on risk-adjusted performance. A fund must have a record of more than three years. Star ratings are graded on a curve: the top 10% of funds receive five stars, the next 22.5% receive four stars, the middle 35% receive three stars, the next 22.5% receive two stars and the bottom 10% get one star. A rating alone is an insufficient basis for an investment decision. A rating is drawn for illustration purposes only and is subject to change. It is not a recommendation to invest in the Fund. It does not predict future performance of the Fund. There is no guarantee that the investment objective of the Fund will be reached.
