

Mirabaud - Global Emerging Market Bond Fund AH cap. GBP

31 August 2023

Investment Overview

An unconstrained, 'best ideas' strategy which invests in a combination of hard and local currency emerging market bonds (sovereign and corporate). A top-down, macro view informs our dynamic allocation across the different geographies, sectors and components of the global fixed income universe, moving between credit and duration risk. Bottom-up analysis incorporates fundamental, technical and valuation (FTV) factors, along with ESG integration to help us identify strong sustainable opportunities. We mitigate down markets with an active hedging process.

Approach to Sustainability

We encourage responsible and sustainable industry practices, and assess how material ESG issues can positively and negatively impact the overall credit profile. The integration of ESG and extra-financial considerations into financial analysis is key to the understanding of risk and long-term opportunity. We engage with issuers to support their commitment to improve their ESG practices. We follow a three step process: 1. Exclusion – we apply an exclusion filter for controversial activities; 2. ESG integration – we assign a credit-specific ESG score to companies; 3. Engagement (post-investment), the investment and SRI teams continue to monitor issuers and ensure compliance with ESG standards, including climate goals, through engagement and dialogue.

Risk Information

Investments in debt securities are subject to interest rate, credit and default risk. The fund will primarily invest in emerging markets that may be more volatile and generate higher operational risks than equity markets of well established economies. The fund may invest in lower rated securities that are subject to higher credit risk and are more volatile than higher rated securities. The fund may invest in asset backed instruments that would lose their value if their underlying assets value was to diminish or if their issuer was to default and be unable to meet its contractual obligations. The fund may invest in securities that are less liquid because buyers/sellers are not always in sufficient numbers to trade these securities readily. Financial derivative instruments may be used as part of the investment process, which may increase the fund volatility and expose the fund to the risk of default of its counterparties. Currency forwards will be used to reduce the currency risk generated by investments in share-classes or instruments that are not denominated in the fund base currency. The effectiveness of that hedging process will be subject to counterparty and operational risk. Cash placed in time deposits or money market funds are exposed to their issuer default risk.

IMPORTANT INFORMATION

This marketing material contains or may incorporate by reference information concerning certain collective investment schemes ("funds") which are only available for distribution in the registered countries. It is for your exclusive use only and it is not intended for any person who is a citizen or resident of any jurisdiction where the publication, distribution or use of the information contained herein would be subject to any restrictions. It may not be copied or transferred.
