Fund Portrait

The JSS Sustainable Equity - Global Climate 2035 seeks to achieve long-term capital appreciation through global investments in equities of companies contributing to a carbon-neutral outcome. The objective is to reduce the carbon footprint (claims on carbon emissions per million USD invested) over time until it reaches net-zero by 2035 in line with J. Safra Sarasin's Climate Pledge. To this end, the fund will invest in «Green Champions», companies enabling substantial emissions reduction through innovative solutions, and «Climate Pledgers», companies on a temperature trajectory below 2°C, in line with the Paris Agreement. The portfolio will be below 2°C at all times, have at least 20% exposure to green revenues, and no exposure to stranded assets. The Sub-Fund is actively managed without replicating any benchmark. However, the Sub-Fund is managed with reference to MSCI World Climate Paris Aligned Net Return (the «Benchmark»).

Review

The global equity market continued to rally in September as an unexpected economic stimulus program in China improved the earnings outlook. Cyclical sectors, such as energy and consumer discretionary, were among the best performing sectors in September. Healthcare was the worst performing sector last month, mostly led by an investor rotation away from defensive stocks. Hong Kong was the best performing country in the MSCI World Climate Paris Aligned Net Return Index last month. Fund performance was behind the benchmark, mostly due to our negative stock selection. Our style allocation also had a slight negative performance impact, mostly related to our bias towards more defensive and medium-capitalization stocks. Our position in Arista Network and Carrier had the largest positive stock selection contribution, while our position in Workday and Stantec were the largest performance detractors in September.

Outlook

A key topic of the Climate Week in London was that the 1.5 degree warming limit has been breached for a whole year in 2023 and that urgent actions are needed to reduce greenhouse gas emissions further. The scientists suggested, to focus more on energy efficiency in buildings, cut methane emissions, and shift consumption towards low-carbon food. Our Climate fund investment concept and holdings already address most of the key emission reduction trends that need to take place to limit global warming. Our Green Champions holdings provide innovative solutions that help to reduce carbon emissions, for example, in the building sector by better insulation and in the power sector by low-carbon renewable power generation. Our Climate Pledger positions with low carbon footprint operations are expected to be better protected from potentially rising carbon emission costs, such as higher carbon taxes. Our portfolio is uniquely constructed to be on a below 2 Celsius degrees global warming pathway, in line with the Paris Agreement's goal.
