Glossary

ESG Risk Coverage (%NAV)

An indication of the percentage of NAV for which issuer-level ESG Risk Rating data is available, relative to the percentage of NAV for which issuer-level ESG Risk Rating data could be available. In this way, coverage is expressed relative to corporate holdings only; the impact of exposure to non-corporate holdings (e.g. cash, hedging instruments, futures, derivatives, funds, non-corporate or unlisted securities such as sovereign bonds) is thus effectively eliminated.

ESG Risk Score

A weighted average of the issuer-level ESG Risk Ratings of the companies within the fund/index. The lower the Score, the higher the allocation to companies with low ESG Risk Ratings.

The weights used reflect the weight of each position (in absolute terms) within the fund's NAV (in absolute terms) for which issuer-level ESG Risk Rating data could ever be provided. ESG Risk Ratings range between a theoretical 0 and 100 (0 = all ESG risk is perfectly managed, 100 = no ESG risk is managed).

Categories are assigned to companies based on the level of unmanaged ESG risk as follows, where X is the ESG Risk Rating:

- $0 \leq X < 10$: Negligible ESG Risk
- $10 \leq X < 20$: Low ESG Risk
- $20 \leq X < 30$: Medium ESG Risk
- $30 \leq X < 40$: High ESG Risk
- $X \geq 40$: Severe ESG Risk

Weighted Average Carbon Intensity (WACI) (tCO₂e/EURm Revenue)

An indicator of the carbon efficiency of funds/indices.

Carbon Intensity values indicate the amount of CO₂ (Scope 1 and Scope 2) being emitted per EUR million of sales for each company. Scope 1 emissions include direct greenhouse gas emissions from sources that are owned or controlled by the companies. Scope 2 emissions include greenhouse gas emissions from the generation of purchased electricity consumed by the companies. Higher values indicate, on a weighted average basis, a higher allocation to companies considered to be carbon intensive.

Notes: All metrics provided for illustrative purposes only with sustainability data sourced from Sustainalytics. All sustainability data extracted as at last month end. Revenues data provided in Euros at source. Carbon Emissions data and Revenues aligned to last full financial year. Portfolio holdings and index constituents as at last month end, with weights adjusted to eliminate the impact of allocations to cash and derivatives. For carbon metrics, weights are further adjusted to reflect only those positions for which carbon emissions data is available. Index shown only where ESG risk coverage exceeds 85% of NAV.
