

Arfina Selection Swiss Small & Mid Cap ESG Fund - I

ISIN: CH1101348691

Investment objective

The Fund seeks to achieve long-term capital appreciation by investing in a diversified portfolio of equities of small and mid-cap companies domiciled in Switzerland or exercising the predominant part of their economic activity in Switzerland.

Investment policy

Arfina is committed to an active investment approach with a focus on bottom-up stock selection. Investment decisions are based on fundamental company analysis. Our investment philosophy is to identify undervalued, high-quality companies with sustainable development properties. We invest in companies taking into account the economic cycle and industry-specific factors, with a long-term time horizon. Due to our investment philosophy, we are flexible with regard to "style investing".

Market comment

The month in brief

No Christmas rally in December 2024. With a decline of 0.8 %, our benchmark SPI Extra and thus the small and mid caps remained somewhat more stable than the broader SPI, dominated by large caps, which recorded a fall of 1.3 %. There was a widespread lack of stimulus, although the major central banks further lowered interest rates - with the SNB even cutting rates by half a percent. For once, the Swiss Franc is trading at a similar level to the Euro as it did at the turn of last year and is actually slightly weaker against the US Dollar.

Rapid weight loss of 20% with new GLP-1 syringes:

Shortly before Christmas, Novo Nordisk presented data on its new weight loss drug. Although 20% weight loss is a significant improvement versus the current blockbuster Ozempic, it is considerably less than the expected 25%. However, what lost 25% was Novo's richly valued stock on that single day.

Novo, Lilly and a number of other pharmaceutical companies are working feverishly on dual and triple agonists, promising not only to deliver even greater weight loss but also fewer side effects. Local active ingredient manufacturers such as Bachem also reacted negatively to Novo's disappointment, as it is reasonable to assume that both major players source their compounds from Bachem.

However, the structural growth of the GLP-1 market will hardly be slowed down by these trial data. There is practically no way around Swiss producers moving forward, regardless of which particular products will gain the largest market shares. The price healthcare will pay for such medicines remains an exciting discussion. On the one hand, high revenues are expected, but on the other hand, obesity is the cause of a large number of secondary diseases where expensive treatments could be avoided if patients achieved a healthier weight.

In any case, the gross margins of Novo, Lilly & Co will remain at sufficiently comfortable levels for suppliers to generate attractive margins as well.
