Investment focus and suitability

The main investment objective of the VI CorE Aktien Schweiz sub-fund is to achieve long-term capital growth while diversifying risk. The investment strategy follows the signals provided by Theta AG's quantity-based stability indicator. The signals are calculated separately and implemented for Large Caps and Mid- and Small-Caps on a monthly basis. On the basis of these signals, the equity allocation is managed in accordance with the risk measured between 0% (high-risk signals) and 100% (low-risk signals). With an equity allocation of 0%, the direct and/or indirect investment rate in liquid investments is 100%, i.e. the equity exposure is hedged with futures.

The equity exposure is managed either by increasing/lowering the equity allocation or via futures. The equity exposure may be between 0 and 100%; consequently, yields and risk may differ greatly from the underlying markets.

Past performance, especially over short periods, does not predict future returns.
