

**Main characteristics**

The investment objective of the DMC FUND - WORLD HY CORPORATE BONDS Sub-Fund is to achieve a long term capital increase by offering to investors an access to the global "high yield" corporate bonds. The management is based on a quantitative approach, called optimized sampling, aimed to align the principal portfolio risk factors with those of the benchmark with the most efficient bands. The global control of portfolio risk is achieved using quantitative process centered on spread maximization procedure that takes into account multiple constraints derived from the benchmark risk profile. The approach is based on inclusion of entire universe, on low turnover and on diversification.

**Market Comment**

Recent macroeconomic indicators suggest that the US economy is cooling and appears to be heading for a soft landing. Inflation, which was sticky in the first quarter, slowed in April and May. However, US central bankers have stressed the need to see further signs of disinflation before cutting interest rates. The Fed's latest projections point to only one rate cut instead of three. In Europe, eurozone GDP growth has turned positive and business confidence has improved somewhat. Inflation has continued to cool, but remains above the 2% target. The ECB cut its key rates by 0.25% in June, but also made clear that tight monetary conditions are still needed to restore price stability. Bond yields in the US and the eurozone were volatile in June and rose slightly over the quarter. Long-dated government and corporate bonds continued to struggle. High-yield corporate and emerging market bonds outperformed other segments with longer duration and higher credit spreads, which tightened until May before widening slightly in June.

The fund recorded a net performance of +0.83% (ICE index: +0.87% and liquid index: +0.64%). In absolute terms, the portfolio and the universe benefitted from a macro narrative that resides between Goldilocks and a Soft Landing. All the sectors evolved consistently with a relatively small dispersion. We can notice the continuation of the good momentum concerning the emerging bonds, especially in South America and in Africa. We can mention the contributions from Volcan Cia Minera, Falabella and Ecopetrol (+3 bps of absolute contribution) within the South America region. In relative terms, the portfolio was in line with the ICE index. The efficient security selection within the communications was counterbalanced by the positioning on the financials. At the issuer level, the overexposure to Intrum penalized the relative performance by 2 bps. At the opposite, the overweights in CSC Holdings and Hughes Satellite Systems were positive for the fund (+4 bps of relative contribution). As far as it concerns the liquid universe, the fund outperformed due to the exposure on the emerging bonds.

The trading activity during the month of June was quite reasonable. We operated 18 trades and were subject to 12 corporate actions. Concerning the changes in the HY universe, the number of issues remains quite stable (3234 issues in July, as compared to 3240 issues in June). High-yield capital market activity decreased -47% m/m in June to its lowest volume YTD. Regarding the new entries, we can mention the new issues from A2A Spa, Alstom and Baldwin Insurance. At the opposite, NGG Finance and Videotron left the universe due to rating reasons (upgrade to Investment Grade). At the portfolio level, only small adjustments will be performed within the energy sector.
