

**Main characteristics**

The investment objective of the DMC FUND - WORLD HY CORPORATE BONDS Sub-Fund is to achieve a long term capital increase by offering to investors an access to the global "high yield" corporate bonds. The management is based on a quantitative approach, called optimized sampling, aimed to align the principal portfolio risk factors with those of the benchmark with the most efficient bonds. The global control of portfolio risk is achieved using quantitative process centered on spread maximization procedure that takes into account multiple constraints derived from the benchmark risk profile. The approach is based on inclusion of entire universe, on low turnover and on diversification.

**Market Comment**

Unexpectedly, bond markets fell sharply in October, erasing much of the summer's gains ahead of the Federal Reserve's long-awaited turnaround. A combination of economic and political factors led to a sharp rise in yields at all maturities over one year. At the beginning of the month, an employment report showing a rebound in hiring and a decline in the US unemployment rate led to a revision in the expected path of interest rates. Donald Trump's recovery in the polls and the possibility of a GOP majority in both the Senate and the House of Representatives helped push yields higher on the prospect of generous tax cuts and a lack of fiscal discipline. High yield corporate bonds coped better with this cocktail of political and economic news thanks to the segment's lower duration and further compression in credit spreads, which are now at levels not seen since 2007.

The fund recorded a net performance of -0.33% (ICE index: -0.23% and liquid index: 0.15%). In absolute terms, the portfolio was driven by consumer-cyclical, non-cyclical and industrial. In the industrial sector Ard Finance and Building Materials were the main contributors with respectively Verisure Holdings, Tenet and CHS Community Health in the consumer, non-cyclical sector. Sunnova and Ecopetrol as well as Petrobras contributed for their part negatively to the energy sector. In relative terms, the portfolio was close to the ICE index with a slight negative relative contribution in the communications and utilities sectors. Bad performances of Beasley Hldg and Sunnova Energy removed 3 bps of the relative performance. A slight underweight on Altice France contributed negatively with another -2 bps. On the other hand a good security selection on CMG Media and Total Play Telecom positively with 2 bps. At the geographical level, both European and US bonds contributed negatively to the overall relative performance. As far as it concerns the liquid universe, the fund underperformed due to the higher duration.

The trading activity during the month of October was very intense due to the important inflows into the fund. We operated 108 trades, and we were subject to 18 corporate actions. Concerning the changes in the HY universe, the number of issues remained stable (3228 issues in September and 3232 in October). Regarding the new entries, we can mention the new issues from Belron UK, California Buyer and Azorra Finance. On the other side, Antero, Expand Energy and PPF Telephone left the universe due to rating reasons (upgrade to Investment Grade). At the portfolio level, adjustments will be performed to increase the credit risk especially on the energy, industrial and consumer cyclical sectors.
