

**Main characteristics**

The investment objective of the DMC FUND - WORLD HY CORPORATE BONDS Sub-Fund is to achieve a long term capital increase by offering to investors an access to the global "high yield" corporate bonds. The management is based on a quantitative approach, called optimized sampling, aimed to align the principal portfolio risk factors with those of the benchmark with the most efficient bonds. The global control of portfolio risk is achieved using quantitative process centered on spread maximization procedure that takes into account multiple constraints derived from the benchmark risk profile. The approach is based on inclusion of entire universe, on low turnover and on diversification.

**Market Comment**

After a challenging start to the year, bond markets performed very well in the third quarter. The gains made over the summer were the result of a sharp decline in US dollar yields in anticipation of monetary easing, which materialised in September. The slowdown in inflation and signs of a downturn in the US labour market prompted the Federal Reserve to cut its key interest rate by 0.5% to a range of 4.75% to 5%. The ECB took a cautious approach, pausing for the summer before cutting its deposit interest rate again, from 3.75% to 3.5%. The Bank of England cut its key interest rate for the first time in August. The easing cycle initiated by central banks is set to continue in the fourth quarter and into 2025. Despite a brief stress episode in early August, credit spreads attached to global HY corporate bonds narrowed over the last three months and remain near the lowest levels observed since the financial crisis of 2008. Recent economic developments are consistent with a soft landing for the US economy and a gradual recovery in Europe after a period of near stagnation. Inflation has been brought under control without triggering a recession or serious repercussions for corporate earnings. Default rates have barely risen, and credit risk premiums are still close to their lowest levels since the 2008 financial crisis. The macroeconomic context and the pre-emptive interest rate cuts by central banks mean that the outlook for corporate bonds remains favourable.

The fund recorded a net performance of +1.05% (ICE index: +1.27% and liquid index: +0.92%). In absolute terms, the portfolio was driven by communications, financials and consumer-cyclical. Within the communication segment, Hughes Satellite and Scripps Escrow recorded very good performances. The spread compression of the global HY corporate bonds resulted in good performance for the portfolio and the interest rate dimension was also favorable. In relative terms, the portfolio was close to the ICE index and took profit from a good security selection within the financial sector (+5 bps of relative contribution). Slight overweights on New Metro Global and Century Link brought +3 bps of relative performance. On the other hand, energy sectors penalized the relative performance by -9bps. At the geographical level, US bonds as well as the European issuers penalized the relative performance with altogether - 10 bps. As far as it concerns the liquid universe, the fund outperformed due to the higher proportion of low rated bonds and the overall higher carry.

The trading activity during the month of September was very intense due to the important inflows to the fund. All the operation costs were perfectly covered by the anti-dilution fees. We operated 74 trades, and we were subject to 9 corporate actions. Concerning the changes in the HY universe, the number of issues was quite stable (3224 issues in August and 3228 in September). Regarding the new entries, we can mention the new issues from Connect Finco, Alpha Generation and Focus Financial Partners. At the opposite, Embraer, National Bank of Greece and Macquarie Airfinance left the universe due to rating reasons (upgrade to Investment Grade). At the portfolio level, adjustments will be performed to increase the credit risk especially on the energy, industrial and consumer cyclical sectors.
