ABOUT THE FUND

The Fund seeks to grow capital and generate income by investing primarily in convertible bonds or equivalent with a minimum rating of B- (S&P or FITCH) or B3 (Moody's) or an equivalent internal rating determined by the Investment Manager. The Fund is actively managed.

The currency risk is limited to 10% of the net assets of the Fund.

The Fund promotes environmental (E) and social (S) characteristics while investing in companies with good governance practices. It aims to obtain an average Environmental, Social and Governance (ESG) rating which is higher than that of the Refinitiv Global Hedged Convertible Bond Index (EUR) (the "Benchmark") and a lower carbon footprint (as measured by the weighted average carbon intensity).

The sustainability strategy is based on 2 main components:

- ESG exclusion criteria (negative screening);
- ESG inclusion approach (positive screening).

A qualitative sustainability analysis is performed on each selected security and is based on the assessment of climate risk, environmental strategy, social capital and corporate governance.

Calculations of the ESG score/rating of the Fund are carried out only on bonds within the portfolio.

The ESG analysis covers at least 80% of the Fund's portfolio.

Since launch. Source of data: UBP. Exchange rate fluctuations can have a positive or a negative impact on performance. Past performance is not a reliable indicator of future results. The value of investments can fall as well as rise. Past performance figures are stated in the currency of the share class and calculated with dividends reinvested; they are free of ongoing charges. The calculation does not take into account sales commissions and other fees, taxes and applicable costs to be paid by the investor. For example, with an investment of EUR 100, the actual investment would amount to EUR 99 in the case of an entrance fee of 1%. At investor level, additional costs may also be incurred (e. g. front-end load or custody fee charged by the financial intermediary).

GLOSSARY

Benchmark

Index used as basis for measuring the performance of an investment fund. Also called reference index or comparison index.

Derivatives

Derivatives are financial instruments whose prices depend on the price movements in a reference variable, known as the underlying. Underlying assets may be shares, equity indices, government bonds, currencies, interest rates, commodities like wheat and gold, or also swaps. Derivative financial instruments may be unconditional forward transactions or they may be options. They are traded either on futures and options exchanges on standardised terms, or over-the-counter (OTC) on freely negotiated terms. Changes in the price of the underlying lead in certain situations to considerably higher price fluctuations in the derivative. Derivatives can be used to hedge against financial risks, to speculate on price changes (trading) or to take advantage of price differences between markets (arbitrage).

Duration

Duration is the average time to payout. This key figure is used to measure the influence of interest rate movements on the price of a bond or bond fund. Duration is defined in years (e. g. 3-year duration means that the value of a bond would increase by 3% if interest rates fall by 1% and vice versa).
