ABOUT THE FUND

The Fund seeks to optimize income in Euro while maintaining similar risk characteristics as the Euro investment grade corporate bond market.

The Fund invests its net assets primarily in Credit Default Swaps ("CDS") for credit exposure and bonds and/or interest rate futures for interest rate exposure.

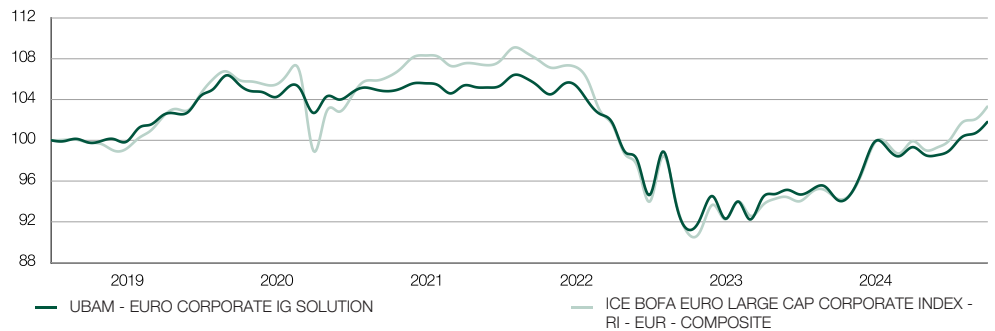

The overall portfolio will have a minimum modified duration of 2 years.

This Benchmark is representative of the risk profile of the Fund in terms of interest rate duration and spread duration. The net assets (excluding those used for the investment in derivatives) can be invested in term deposits with a maturity up to 12 months.

The Fund is actively managed and aims to outperform the ICE BofAML Euro Large Cap Corporate Index (the "Benchmark").

Although the Fund's risk profile will be similar to the Benchmark, the portfolio's investments are expected to deviate materially from the Benchmark's constituents in respect to countries, sectors, issuers and instruments, in order to take advantage of specific investment opportunities.

Since launch. Source of data: UBP. Exchange rate fluctuations can have a positive or a negative impact on performance. Past performance is not a reliable indicator of future results. The value of investments can fall as well as rise. Past performance figures are stated in the currency of the share class and calculated with dividends reinvested; they are free of ongoing charges. The calculation does not take into account sales commissions and other fees, taxes and applicable costs to be paid by the investor. For example, with an investment of EUR 100, the actual investment would amount to EUR 99 in the case of an entrance fee of 1%. At investor level, additional costs may also be incurred (e. g. front-end load or custody fee charged by the financial intermediary).

GLOSSARY

Benchmark

Index used as basis for measuring the performance of an investment fund. Also called reference index or comparison index.

Derivatives

Derivatives are financial instruments whose prices depend on the price movements in a reference variable, known as the underlying. Underlying assets may be shares, equity indices, government bonds, currencies, interest rates, commodities like wheat and gold, or also swaps. Derivative financial instruments may be unconditional forward transactions or they may be options. They are traded either on futures and options exchanges on standardised terms, or over-the-counter (OTC) on freely negotiated terms. Changes in the price of the underlying lead in certain situations to considerably higher price fluctuations in the derivative. Derivatives can be used to hedge against financial risks, to speculate on price changes (trading) or to take advantage of price differences between markets (arbitrage).

Duration

Duration is the average time to payout. This key figure is used to measure the influence of interest rate movements on the price of a bond or bond fund. Duration is defined in years (e. g. 3-year duration means that the value of a bond would increase by 3% if interest rates fall by 1% and vice versa).
