Investment strategy

Gutzwiller ONE is an actively managed US equity fund. The investment decisions are based on a fundamental value-oriented stock picking methodology. The fund will employ bottom-up fundamental analysis to select the stocks with techniques such as company interviews, analysis of the annual reports, competitor analysis and valuation modelling of the companies. We target undervalued stocks that are trading for less than what the company is determined to be worth. The difference between the stock price and our valuation of the company is then adjusted for the risk within the company which is assessed through fundamental analysis of each stock. This analysis is designed to cover three major groups of company risk, which are the business model and its competitive advantage, the management's talent and track record, and, finally, the industry trends such as the underlying growth of the industry and the volatility of that growth. The analysis produces a numerical score and the stocks that score best are selected for investment by the fund as these are deemed to be the best opportunities.
