## Fund description

The PPF II - Quantitative Global Equity Fund invests in liquid international stocks. Stock selection is determined by a continuous price-based quantitative analysis of a defined and periodically reviewed universe of global large cap stocks. The universe considers different countries, themes and sectors for the purpose of diversification. Portfolio construction aims to be balanced and the high liquidity of the stocks in the universe enables immediate realization of the positions at any time. As part of the risk management process, equity exposure can be hedged selectively by means of financial futures. The foreign exchange risks of the investments can be reduced by forward exchange transactions.

## Current data (31.08.2024)

NAV per Unit	CHF 115.68
NAV Total	USD 51.54 Mio.

## Fund characteristics
