

Raiffeisen-Global-Fundamental-Rent (ein Anlagefonds von Raiffeisen Capital Management Österreich) (R)

Current fund strategy

Raiffeisen-Global-Fundamental-Rent (ein Anlagefonds von Raiffeisen Capital Management Österreich) (R) is a bond fund. It invests globally mainly in government bonds in the respective national currencies of countries which, measured on the basis of a number of fundamental indicators, are in the best macroeconomic and financial condition or have shown the largest improvement in such in the recent past. The Fund is particularly suitable for investors who wish to benefit from the earnings potential of a well-diversified global government bond investment and are aware of the related elevated risks, ranging from unfavourable currency developments and elevated price volatility to possible loss of capital in the event of strong increases in yields on the bond markets.

The fund is actively managed without reference to a benchmark.

Comments from fund management

Bond prices trended firmer in June. Mixed economic indicators plus a positive inflation surprise in the USA combined with a key rate cut by the ECB and growing political uncertainty in France lent support to most government bonds.

During the annual score evaluation, some initial changes in the positioning were started at the end of April 2024. Slovakian, Mexican, Australian, and New Zealand government bonds were sold while Irish and Indonesian issues were reduced. Conversely, Czech, Hungarian, and Polish government bonds were bought and the allocation to Malaysia increased.

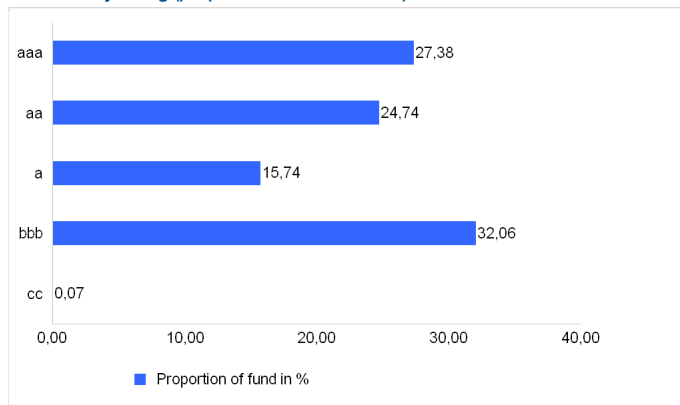

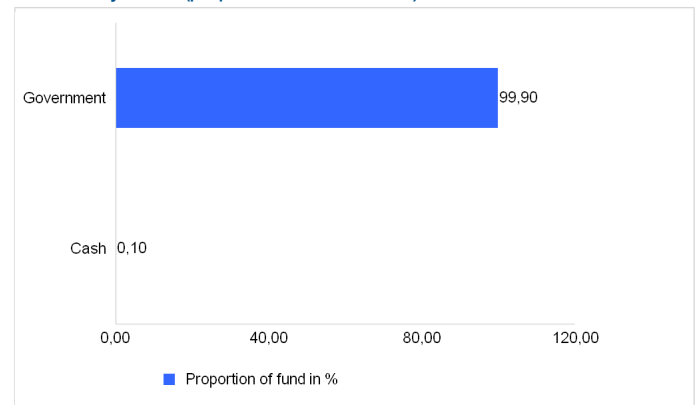

We anticipate that the ECB will be able to follow up on its first key rate cut in June with further monetary policy easing as the inflationary pressure declines through the year. (20.06.2024)

Please note that Raiffeisen Kapitalanlage-Gesellschaft m.b.H. has the right to terminate the arrangements made for the distribution of fund unit certificates outside of the fund's country of domicile, Austria.

The collective investment scheme is domiciled in Austria.

¹ The performance is calculated by Raiffeisen KAG on the basis of published fund prices, using the method developed by OeKB (Österreichische Kontrollbank AG). Individual costs such as transaction fees, the subscription fee, the redemption fee, the custody charges of the investor and taxes are not included in the performance calculation. If included, these would lead to a lower performance. Past performance is not a reliable indicator of future performance. Markets could develop very differently in the future. Based on the illustration, you can assess how the fund was managed in the past. Notice for investors with a different functional currency than the fund currency: We expressly point out that returns may rise or fall due to currency fluctuations.

² The risk indicator assumes you keep the product for 8 years.

³ These are the ongoing costs incurred if you exit after 1 year. The ongoing costs are comprised of management fees and other administrative or operating costs (Estimate on the basis of the actual costs over the last year) as well as transaction costs (estimate of the costs incurred when the management company buys and sells the underlying investments for the fund). The actual amount will vary depending on how much the management company buys and sells.) Value pursuant to the key information document valid at the time of preparing this information.

⁴ For securities with an early call right, this is taken into account when calculating bond indicators. If issuers do not exercise the early call option, this results in a corresponding extension of the maturity structure and thus changes the above-mentioned indicators.
