

JOHCM Global Select Fund

Fund overview

- The Fund aims to generate long-term total returns through active management of a concentrated portfolio of listed global equities securities
- Fund managers Christopher Lees and Nudgem Richyal have a growth at a reasonable price (GARP) philosophy and aim for consistency of returns by exploiting multiple market anomalies/ inefficiencies
- They believe that they increase the probability of finding attractive stocks by looking where traditional growth investors do not look: stocks early in the growth life-cycle, off the beaten track, or in out of favour areas of the stock market that are recovering
- SFDR classification: Article 8. Please click [here](#) for further details
- Benchmark: MSCI AC World Index
- The Fund is managed on an 'unconstrained basis' with no restrictions in terms of regional or sector allocation versus its benchmark
- Please refer to the Prospectus/KID for further information

Share class: A EUR Class

ISIN: IE00B3DBRP41

Fund details

Fund size	EUR 1.40bn
Strategy size	EUR 2.80bn
Launch date	30 September 2008

Past performance is no guarantee of future performance.

The value of an investment and the income from it can fall as well as rise as a result of market and currency fluctuations and you may not get back the amount originally invested. For further information on risks please refer to the Fund's KID and/or the Prospectus. Investing in companies in emerging markets involves higher risk than investing in established economies or securities markets. Emerging Markets may have less stable legal and political systems, which could affect the safe-keeping or value of assets. The Fund's investment include shares in small-cap companies and these tend to be traded less frequently and in lower volumes than larger companies making them potentially less liquid and more volatile.

NAV of Share Class A in EUR, net income reinvested, net of fees. The A EUR Class was launched on 30 September 2008. Performance of other share classes may vary and is available on request.

*Annualised since launch. **Refers to the fund's ranking in a peer group of funds made up from all funds classified as Global Equity by either the Investment Association (IA) or Lipper Global. Funds included may be domiciled in the UK, Ireland, or Luxembourg. Lipper ranking is from A GBP Class.

Fund manager's commentary

- We think the current equity market sell-off and volatility are most likely a Bull market correction, but we do recognise that recent events have increased the probability of it morphing into a Bear market
- Pullbacks of more than 5% have occurred three times per year on average and corrections of over 10% have occurred once per year on average. The bounce back has usually been above long-term average returns
- The most volatile and worst-hit so far in this global sell-off has been the Japanese equity market, which has hurt our performance in late July and so far in early August

We think the current equity market sell-off and volatility are most likely a Bull market correction. Still, we recognise that recent events have increased the probability of it morphing into a Bear market. As we write this after the market close on 6th August, the S&P 500 has retreated nearly 8% from its 16th July high, with a three-day pullback of over 6% in early August. Pullbacks of this magnitude are not unusual. Since the 1930s, USA pullbacks of more than 5% have occurred 3x per year on average, and corrections of over 10% have occurred 1x per year on average, and the bounce back has usually been above long-term average returns.

The most volatile and worst hit so far in this global sell-off has been the Japanese equity market, which has hurt our performance in late July and so far in August. Monday 5th August's 4,451-point drop in the Nikkei and the 310-point fall in the TOPIX were their biggest-ever daily points falls (second-biggest percentage daily falls after Tuesday, 20th October 1987, in response to US Black Monday crash). Their rally on Tuesday 6th August 2024, by around 10%, was their biggest ever daily points rise.

The two Japanese indexes dropped about 25% from their all-time closing highs on 11th July to their closing lows on Monday 5th August, partly in response to the unwinding of the Yen carry trade. We think that's more than sufficient a correction and represents a compelling opportunity to buy the dip in Japan once the current exceptionally high volatility subsides and the currency stabilises.

Clients have been asking us if this volatility portends a historic rotation in the market's leadership. In response, here are some key data points from an excellent piece of research from Empirical Research Partners that looks at the market's large cap/technology-related momentum leadership and uses past tech booms to provide some perspective on the potential range of outcomes from here.

In the past, stocks in the top quintile of price momentum have had a bit less than a 40% chance of outperforming over the following year when coming off stellar runs of outperformance like the last 12 months. To dig deeper, they looked specifically at four past tech booms (followed by busts) that have some resemblance to today's AI-fuelled surge: the Mainframe Era in the late 1960s, the PC Era of the early 1980s, the New Economy of the late 1990s, and the early-Pandemic stay-at-home tech plays.

They conclude that the opportunity cost of abandoning the momentum leadership is much higher now. Stocks in the highest quintile of price momentum currently have a cap-weighted free cash flow margin of 23%; back at the peak of the New Economy Era the best-performing stocks had a minus 2% free cash flow margin. The cost of carry in the current leadership is (massively) positive, not negative. On the other hand, they point out that the free cash flow yield of the momentum leadership is 125 basis points below the market's yield. Investors now believe in the durability of these significant free cash flows, circumscribing the upside and reducing the margin of safety if anything goes wrong.

Historical data from Bloomberg shows that USA equity drawdowns tend to be followed by above average returns. From 1928 to 2024, the average 3-, 6- and 12-month returns have been 2%, 4% and 8% respectively. After three-day drawdowns of 6% or more, the subsequent 3-, 6- and 12-month returns have been better than average at 7%, 9% and 15%, respectively. We are currently sifting through the wreckage of this global contagion/sell-off to find what we believe are some new exciting opportunities to add to the portfolio.
