Fund objectives and investment policy

The investment objective of this investment fund is to achieve long-term capital growth through investments in equities and other equity securities of Swiss companies. The investment fund uses the performance of the Swiss Performance Index (SPI) as a benchmark. The investment fund is managed by the fund management on a discretionary basis. The fund management is not limited to investments pursuant to the composition of the SPI. The fund's assets are mainly invested in equities and other equity securities (equities, dividend rights certificates, cooperative shares, participation certificates and similar) of companies with a registered office or predominant activity in Switzerland. Up to one-third of the fund's assets may be invested in equities and other equity securities of companies listed on European and North American stock markets, equity or index funds that are part of a Swiss equity index or a specific segment thereof, debt securities or money market instruments. Derivatives may be used to achieve the investment objective and to reduce risk or manage the investment fund more efficiently. Shares of the investment fund may, in principle, be redeemed on any banking day, subject to the exceptions listed in the prospectus. The returns from this share class are reinvested. The investment fund shall also bear all incidental costs for the purchase and sale of investments (standard brokerage fees, commissions, taxes, etc.) incurred in the management of the investment fund's assets. These costs shall be directly offset against the acquisition or redemption value of the respective investments. These incidental costs shall be incurred in addition to the fees listed under "Charges" and reduce the return on investment.

Above is the Investment Objective of the fund. For details on the fund's Investment Policy please see the KID.

Relevant risks associated with an investment in this fund are shown below and should be carefully considered before making any investment.

Past Performance is not a guide to future performance and may not be repeated. The value of investments and the income from them may go down as well as up and investors may not get back the amounts originally invested. Exchange rate changes may cause the value of investments to fall as well as rise. Performance data does not take into account any commissions and costs, if any, charged when units or shares of any fund, as applicable, are issued and redeemed.

Risk considerations

Currency risk: The investment fund may be exposed to different currencies. Changes in foreign exchange rates may result in losses for the investment fund.

Liquidity risk: In difficult market situations, the investment fund may not be able to sell a security at its full value, or not sell it at all. This could have an impact on performance and cause the investment fund to defer or suspend redemptions of its shares.

Operational risk: Failures at service providers could lead to disruptions of business operations or losses.

Derivatives risk: A derivative may not perform as expected and may cause losses greater than the cost of the derivative.

Counterparty risk: The counterparty risk refers to the likelihood that a counterparty is unable to pay an OTC transaction or pending transaction. If a party becomes insolvent, this may result in the investment fund incurring financial losses.

Default risk / money market and deposits: If a deposit institution or an issuer of money market instruments defaults, this may result in losses.

Issuer risk: Issuer risk is the risk that an issuer of securities becomes insolvent and is therefore not in a position to make capital and/or interest payments for its obligations, which may result in the security holders losing their invested capital.

Concentration risk: Although the investment fund seeks to diversify its investments, it may at certain times hold substantial positions in a relatively limited number of investments, sectors, regions and/or issuers, and the investment fund is therefore subject to the risks associated with such concentration. Concentrating the investments can increase the risk of loss.

Capital risk / negative income: If interest rates are very low or negative, the investment fund may have no return or a negative return and you may not be able to recover your full investment.

Equity risk: Equity prices fluctuate daily based on many factors, including general, economic, industry and company news.
