

FERI Sustainable Quality I

Marketing Information for Professional Investors

October 31st, 2024

Fund Description

The investment objective of FERI Sustainable Quality is to achieve appropriate long-term capital growth and a reasonable current income by means of (direct and indirect) investments primarily in carefully selected quality equities and other equity securities worldwide, denominated in a freely convertible currency. The OECD countries form the main investment regions, with a focus on Europe (including Switzerland) and North America. In particular, leading companies with attractive valuations in terms of financial strength, but also in terms of market positioning, business model and management are considered, with the selection being made on the basis of a fundamental analysis based on strict valuation criteria. The fund is a product in accordance with Art. 8 of Regulation (EU) 2019/2088 of the European Parliament and of the Council of November 27, 2019. In addition to the economic quality assessment, ethical, social, environmental and governance-related aspects are also taken into account (the information required in accordance with Art. 10 of EU Regulation 2088/2019 on the approach to sustainability strategies can be found on our website www.feri.de).

Performance according BVI-Method¹

¹The fund does not have a fixed benchmark market; the MSCI World Equal Weighted Index is only used as a guide. As of May 25, 2021, there was a name change and at the same time FERI Sustainable Quality became an Art. 8 fund. Inception of the share class: 31.05.2017

Performance Statistics¹

| | MTD | YTD | 1 Year | Since Inception | p.a. Since Inception | Volatility p.a. |
|-----------------|--------|--------|--------|-----------------|----------------------|-----------------|
| Fund | -1.15% | 19.61% | 30.74% | 43.46% | 4.98% | 16.71% |
| Reference Index | -1.26% | 11.77% | 20.83% | 43.51% | 4.99% | 14.56% |
| Outperf. | 0.11% | 7.84% | 9.91% | -0.04% | -0.00% | n/a |

¹Historical performance may not be a reliable indicator of future performance. The shown performance development does not take into account the commissions and fees payable at issue and redemption. No benchmark is used. The performance is the percentage change between the invested assets at the beginning of the investment period and their value at the end of the investment period. Distributions are immediately invested in new fund units. This ensures comparability of the performance of distributing and accumulating funds. The performance is calculated on the basis of the unit values determined on each valuation date.

Fund Profile

Fund Domicile: Switzerland
Fund Currency: CHF
Investment Manager: FERI (Schweiz) AG
Fund Administrator: LLB Swiss Investment AG
Custodian Bank: Basler Kantonalbank
Fund Size: CHF 45.74 m
SFDR-Status: Article 8
German Tax Status: Equity Funds according to InvStG with partial exemption
Tax Transparency: CH
Distribution Countries: CH, DE
Actively Managed Fund: Actively managed
Fiscal Year End: December 31st

Share Class I (CHF)

ISIN: CH0361013110
Share Price: CHF 142.68
Valor: 36101311
Bloomberg: MCGLQUI SW

Inception of the share class: 31.05.2017

Distribution Type: accumulating

Minimum Investment: 500,000

Subscription Fee: none

Redemption Fee: none

Administration Fee: max. 1.10% p.a.

Total Expense Ratio (TER): 1.09% (31.12.2023)

Subscription/Redemption: daily, cut off 12:00 pm

Additional Share Class:

Share Class P (CH0361013086)
Share Class A (CH0475047939)

Annual Performance according BVI-Method^{2, 3}

²Historical performance may not be a reliable indicator of future performance.

³The gross performance (BVI-Method) includes all costs associated with the management of the fund (e.g. management fees) whereas the net performance includes the subscription fee in addition to that. Further fees and commissions that are incurred due to issuance and redemption of shares are not included in the depiction (e.g. depository fees, commissions and other charge). Model calculation (net): An investor desires to buy shares for EUR 1000. Assuming a maximal subscription fee of 5% he would have to pay a one-time fee of EUR 50. In addition to that there may be further depository fees that would diminish the performance. Depository fees are incurred according to the price and services list of the respective depository bank.

Geographic Allocation

SYNTHETIC RISK INDICATOR (SRI)

Lower risk Higher risk

Risk Profile

We have classified this product as 4 out of 7, which is a medium. This rates the potential losses from future performance at a medium level, and poor market conditions are very unlikely to impact our capacity to pay you.

Investment Suitability

The Fund is addressed to private clients, professional clients and eligible counterparties targeting long-term wealth creation. All investors should have a long-term investment horizon and be willing to tolerate strong price fluctuations or even long term decrease of the net asset value.

Risks

Liquidity Risk:

The tradability of the instruments employed may be limited due to significant fluctuations of the financial markets/of the underlying market, which can also lead to lower prices.

Operational Risk:

The fund may be a victim of fraud or other criminal offences. Additionally, the portfolio may suffer losses due to human mistakes, system or process errors, inadequate procedures or controls and external events such as natural disasters.

Derivatives Risk:

The fund can use derivatives for speculative purposes. This increased return potential goes along with increased risk.

Credit Risk:

The fund may engage in transactions with various counterparties. If a counterparty becomes insolvent or has pecuniary difficulties, it may not be able to meet its obligations and thereby cause losses to the fund. This cannot be completely excluded even with a careful selection of the investment.

Currency Risk:

The risk of loss due to exchange rate fluctuations or foreign exchange regulations.

Sustainability Risk:

Sustainability risk is the negative impact on the value of an investment caused by sustainability factors, which include environmental, social and/or management specific aspects, and can exogenous in nature and/or company specific.

Detailed information on opportunities and risks can be found in the sales prospectus.

How we integrate sustainability into the investment process

Information pursuant to Art. 10 of the Regulation (EU) 2019/2088 (SFDR) on the integration of sustainability according to Art. 8 SFDR

Our comprehensive understanding of sustainable investments is implemented in the fund. An integrated sustainability and financial analysis enables the identification of the most important sustainable impacts of a company. The approach analyzes development trends in addition to exclusion criteria and uses a proprietary ESG risk scoring model developed to compensate for the potential weaknesses of ESG ratings and rankings offered in the market. The model uses carefully selected and financially relevant ESG risk data that are matched against quantitative and qualitative scores from several key data providers. This ensures a broader, more reliable and independent ESG assessment. Depending on the significance of ESG opportunities and risks, this ESG analysis can fundamentally influence the expected return on an investment and the portfolio allocation decision.

FERI ESG Risk Score*

*FERI's proprietary ESG risk model analyzes around 180 ESG data points for each portfolio company and scores them according to their materiality and the company's ability to manage the respective risk. A low score indicates a lower ESG-related risk rating.

ESG Manager Commentary

ABB has made its low-voltage distribution system Kabelleon more environmentally friendly. The technology company now uses recycled steel produced with renewable energy in its systems.

As the company announced in a statement in October, this change reduces the carbon footprint of the low-voltage distribution system by nearly one-third. ABB sources the "green" steel from the steel manufacturer ArcelorMittal.

According to the latest sustainability report, ABB generated approximately 16 million tons of CO2 last year through the purchase of goods and services. By 2050, ABB aims to reduce these emissions by 90%.

Manager Review

After a period of steady recovery from the September lows, equity markets faced heightened volatility during the final week of October. This was driven mainly by: (1) elevated market expectations for the current earnings season, where meeting forecasts often fell short of satisfying investors; (2) uncertainty surrounding the outcome of the U.S. elections; and (3) a series of economic data releases, including an advance estimate of US Q3 GDP growth, the Federal Reserve's preferred inflation measure, and the October employment report. Collectively, these releases indicated a weakening labor market, a slow but ongoing economic expansion, and an inflation situation that may not be completely out of the woods yet.

Despite these market fluctuations, our portfolio-companies demonstrated resilience, as evidenced by a predominantly positive earnings season. The outlooks provided also underscored their ability to withstand current macroeconomic challenges.

Leveraging the tactical cash position of approximately 15% held at the end of September, we seized the opportunity presented by October's market volatility to reinvest. We focused on increasing positions in our high-conviction portfolio-holdings, particularly where we believed the market had either overreacted or underappreciated solid reported and expected business developments. With attractive price-value asymmetries and robust fundamentals, we believe our portfolio-companies remain well positioned to navigate the current global landscape and capitalize on future opportunities.
