Risks

The fund may employ higher-risk strategies within fixed income and currency markets, and may take both long and short positions utilizing derivatives. This may result in additional risks, particularly counterparty risk. Depending on the credit quality, default risk is higher with corporate bonds than with government bonds and higher with high-yield or emerging market bonds than with investment grade corporate and government bonds. Changes in interest rates, credit spreads and exchange rates may have an impact on the fund's value. Emerging markets are at an early stage of development, which may involve a high level of price volatility and other specific risks (transparency, regulatory hurdles, corporate governance, political and social challenges) and liquidity may be limited. Increased portfolio flexibility may increase the risk of PM decisions adversely impacting performance. All investments are subject to fluctuations. Every fund has specific risks, which can significantly increase under unusual market conditions. The above does require that investors have a corresponding risk tolerance and capacity. This Fund may not be appropriate for investors who plan to withdraw their money before the recommended holding period disclosed in the PRIIPs KID, if available for this share class.

All investments are subject to market fluctuations. Every fund has specific risks, which can significantly increase under unusual market conditions. Please consult your client advisor for more information on the investment risks of this product.
