Benefits

Investors can make an investment akin to a single bond with a fixed maturity, but with all the benefits of diversification and professional management.

Investors can lock in yields and credit spreads at current levels due to a 'buy and hold to maturity' approach.

Investors have access to a bond investment with limited duration risk, provided they stay invested until maturity, which may be of particular interest for those concerned about rising interest rates.

Investors can gain broad exposure to emerging markets sovereign and corporate bonds in a cost- and time-efficient way.

Additional information

- At launch, the average credit quality of the bonds in the portfolio is investment grade, i.e. BBB (Standard & Poor's), and Baa2 (Moody's) respectively. This can change during the life of the fund.
- No single bond in the portfolio matures later than the fund itself (fund maturity: October 2024). Cash flows will be reinvested in issues not purchased at fund inception, or used to increase any existing portfolio positions, depending on the market environment, or held in cash / cash equivalents to meet fund liquidity requirements.
- The portfolio management team generally follows a 'buy and hold to maturity' approach, while continuously monitoring all the bonds in the portfolio with scrutiny over the full life of the fund and taking appropriate action as and when required.
- This fund is not managed in reference to any benchmark.

Risks

The fund is exposed to the risk of default on the payment of coupon or principal by issuers it holds in the underlying portfolio. Should any such default event occur, the value of the fund will be negatively impacted. During the fund's life, its net asset value (NAV) will be impacted by interest rate and credit spread movements affecting its underlying bond holdings. Typically, a bond's value is negatively impacted by rising interest rates and/or credit spread widening. Depending on the credit quality, the default risk is higher in the case of high yield bonds than with investment grade corporate and government bonds. Emerging markets are at an early stage of development, which can typically involve a high level of price volatility and other specific risks, such as lower market transparency, regulatory hurdles, corporate governance as well as political and social challenges. The fund does not provide any guarantee on pay-outs of income and final net asset value. There is no specific estimate of the fund's value as of maturity. This value depends on repayments of the bonds purchased by the fund and the reinvestment of undistributed interest income. All investments are subject to market fluctuations. Every fund has specific risks, which may increase considerably in unusual market conditions. This requires corresponding risk tolerance and capacity. This Fund may not be appropriate for investors who plan to withdraw their money before the recommended holding period disclosed in the PRIIPs KID, if available for this share class.
