Additional information

- The weighted average maturity of the securities in the portfolio may not exceed 6 months, while the final maturity of any fixed interest rate investment may not exceed 1 year.
- Classified as 'Standard VNAV Money Market Fund' by the common European money market fund definition.
- Principal investment objective to generate long-term performance consistent with prevailing market indices for money market instruments denominated in the fund's currency. At times of high market volatility, the fund's performance may diverge significantly from that of the benchmark.
- This sub-fund promotes environmental and/or social characteristics but does not have a sustainable investment objective.

Risks

The funds invest in money market instruments and may therefore be subject to volatility. For funds following the mark-to-market approach the value of a unit may fall below the purchase price. Changes in interest rates have an effect on the value of the portfolio. The funds might use derivatives which can reduce investor risks or give rise to market risks as well as potential loss due to failure of counterparty. High-grade investment instruments are usually subject to a low credit risk (i.e. potential loss due to failure of issuer). Every fund reveals specific risks. These aspects require corresponding risk tolerance and capacity. This Fund may not be appropriate for investors who plan to withdraw their money before the recommended holding period disclosed in the PRIIPs KID, if available for this share class.
