

# UBS Strategy Xtra Fund Balanced USD P-4%-mdist

## Fund Fact Sheet

UBS Asset Allocation Funds > UBS Strategy Xtra Funds > Balanced

### Fund description

- The actively managed fund invests globally in a diversified range of mainly high-quality bonds, equities as well as alternative investments, including hedge funds.
- The fund generally strikes a fairly even balance between equities and fixed-income instruments, and is complemented by investments in alternative investments, including hedge funds.
- Foreign currencies are largely hedged versus the reference currency. Nevertheless, an active currency strategy is applied if opportunities are seen.

Please see additional information on the following page.

### Performance (basis USD, net of fees)<sup>1</sup>

Past performance is not a reliable indicator of future results.

Name of fund	<b>UBS (Lux) Strategy Xtra SICAV - Balanced (USD)</b>
Share class	UBS (Lux) Strategy Xtra SICAV - Balanced (USD) P-4%-mdist

## Benefits

The fund offers the investor straightforward and convenient access to UBS House View, which draws on the professional insights of UBS investment specialists worldwide. The inclusion of optimized alternative investments, including hedge funds optimises the portfolio's risk/return profile. Investors benefit globally from diversified market opportunities in a wide variety of asset classes. The weighting of the different asset classes is maintained within a specific range in order to take account of the fund's risk profile. The fund is attractive for investors who see risks as opportunities too. The fund aims to generate interest and dividend income as well as capital gains.

## Risks

The fund invests in equities, bonds of varying credit quality, money market securities on a global basis, as well as in alternative forms of investment such as hedge funds. It may therefore be subject to fluctuations in value. The fund may use derivatives which can reduce investment risk or give rise to additional risks (inter alia the counterparty risk). The fund can invest in less liquid assets that may be difficult to sell in the case of distressed markets. It therefore cannot be ruled out that the daily issue and redemption of fund units may be suspended temporarily. The value of a unit may fall below the purchase price. This requires an elevated risk tolerance and capacity. Every fund reveals specific risks, a description of these risks can be found in the prospectus. This Fund may not be appropriate for investors who plan to withdraw their money before the recommended holding period disclosed in the PRIIPs KID, if available for this share class. The monthly 4%-mdist distributing share classes may distribute capital as well as income. It is possible that the distributions result in an erosion of assets and a reduction of invested capital. There are potential negative tax consequences for some investors in some jurisdictions. Investors in some jurisdictions may incur a higher rate of tax on distributed capital than on any capital gains which are realised on disposal of fund shares. Some investors may therefore choose to invest in the accumulating (-acc) instead of the distributing (-dist) share classes. Investors may be taxed at a later point in time on income and capital arising on accumulating (-acc) share classes compared to distributing (-dist) share classes. Investors should seek their own tax advice.

# UBS Strategy Xtra Fund Balanced USD P-4%-mdist

## Additional information

- The fund is based on UBS's investment policy, the UBS House View.
- The fund invests without any benchmark restrictions. The performance of the fund is not benchmarked against an index.
- This share class distributes a constant percentage share of the NAV, not a constant amount.
- This share class is designed for investors who want to profit from performance opportunities on the financial markets and at the same time wish more stable distributions at a specific percentage level to cover recurring liquidity needs.
- As the distributions are substantial, this share class is not designed for investors who want to build wealth. The latter may prefer the accumulating share class.
- This share class must not be seen as an alternative to a savings account or fixed-interest paying investments.
- The percentage distribution rate of this share class is unrelated to the interest or other income generated in the fund. The distribution is a percentage payment of the current amount of investment.
- It is possible that the distributions result in an erosion of assets and a reduction of invested capital.
- This share class may distribute capital as well as income. There are potential negative tax consequences for some investors in some jurisdictions. See risk section below.

Please note that additional fees (e.g. entry or exit fees) may be charged. Please refer to your financial adviser for more details. Investors should read the Key Information Document, Prospectus and any applicable local offering document prior to investing and to get complete information of the risks. Investors are acquiring units or shares in a fund, and not in a given underlying asset such as building or shares of a company. For a definition of financial terms refer to the glossary available at [www.ubs.com/am-glossary](http://www.ubs.com/am-glossary).

**For marketing and information purposes by UBS.** UBS funds under Luxembourg law. Arrangements for marketing fund units mentioned in this document may be terminated at the initiative of the management company of the fund(s). Representative in Switzerland for UBS funds established under foreign law: UBS Fund Management (Switzerland) AG, P.O. Box, CH-4002 Basel. Paying agent: UBS Switzerland AG, Bahnhofstrasse 45, CH-8001 Zurich. Prospectuses, key information document, the articles of association or the management regulations as well as annual and semi-annual reports of UBS funds are available in a language required by the local applicable law free of charge from UBS Asset Management Switzerland AG, c/o UBS AG, Bahnhofstrasse 45, 8001 Zürich, Switzerland or from UBS Fund Management (Switzerland) AG, P.O. Box, CH-4002 Basel. The product described herein aligns to Article 6 Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector. Information on sustainability-related aspects pursuant to that regulation can be found on [www.ubs.com/funds](http://www.ubs.com/funds). Before investing in a product please read the latest prospectus and key information document or similar legal documentation carefully and thoroughly. Any decision to invest should take into account all the characteristics or objectives of the product as described in its prospectus, or similar legal documentation. Investors are acquiring units or shares in a fund, and not in a given underlying asset such as building or shares of a company. The information and opinions contained in this document have been compiled or arrived at based upon information obtained from sources believed to be reliable and in good faith, but is not guaranteed as being accurate, nor is it a complete statement or summary of the securities, markets or developments referred to in the document. Members of the UBS Group may have a position in and may make a purchase and / or sale of any of the securities or other financial instruments mentioned in this document. Units of UBS funds mentioned herein may not be eligible for sale in all jurisdictions or to certain categories of investors and may not be offered, sold or delivered in the United States. The information mentioned herein is not intended to be construed as a solicitation or an offer to buy or sell any securities or related financial instruments. Past performance is not a reliable indicator of future results. The calculated performance takes all costs on the product level into consideration (ongoing costs). The entry and exit costs, which would have a negative impact on the performance, are not taken into consideration. If whole or part of the total costs to be paid is different from your reference currency, the costs may increase or decrease as a result of currency and exchange rate fluctuations. Commissions and costs have a negative impact on the investment and on the expected returns. If the currency of a financial product or financial service is different from your reference currency, the return can increase or decrease as a result of currency and exchange rate fluctuations. This information pays no regard to the specific or future investment objectives, financial or tax situation or particular needs of any specific recipient. Future performance is subject to taxation which depends on the personal situation of each investor and which may change in the future. # UBS Strategy Xtra Fund Balanced USD P-4%-mdist

UBS AM standard glossary. For additional investment terms, please refer to the online glossary [here](#).

**Accumulation:** Reinvestment of income generated by the investment fund into the fund's assets.

**Active management:** Here the fund manager uses their expertise to pick investments to achieve the fund's objectives.

**Alpha:** A fund's alpha is its outperformance relative to a benchmark. If a fund has a consistently high alpha this can indicate skillful management. If the benchmark returns 12% and the portfolio returns 14%, the outperformance (alpha) is equal to  $14\% - 12\% = 2\%$ . Compare with beta.

**Benchmark:** Index against which an investment fund's performance is measured. Also called a reference index.

**Beta:** A measure of risk that indicates an investment's sensitivity to fluctuations in the market, as represented by the relevant benchmark. For example, a beta of 1.2 tells us that the value of an investment fund can be expected to change by 12% if the market is forecast to move by 10%.

**Bonds:** Debt instruments with a fixed or variable rate of interest and generally with a fixed maturity and redemption date. The most common issuers are major companies, government bodies such as the federal government and the cantons, public institutions, and international organizations such as the World Bank or the International Monetary Fund.

**Commodities:** A tradeable item that can be further processed and sold. Industrial (metals), agricultural (wool, wheat, sugar) and bulk commodities (coal, iron ore) are examples. It is possible to invest in physical commodities or in derivatives based on commodity prices.

**Convertible bonds:** Bonds that feature a conversion right entitling the holder to convert the bond into shares of the company in question at a certain point in time and at a pre-defined conversion ratio.

**Corporate bonds:** Strictly speaking, corporate bonds are those issued by companies. Generally, however, the term is used to cover all bonds other than those issued by governments in their own currencies. Therefore the "credit" sector, as it is often known, includes issues by companies, supranational organizations and government agencies. The key feature that distinguishes corporate bonds from government bonds is the risk of default – see credit risk.

**Correlation:** A measure of the degree to which the price trends of various investment categories or instruments move in the same direction.

**Derivatives:** Investments whose value is linked to another investment, to the performance of a stock exchange or to some other variable factor, such as interest rates.

**Distribution:** Payment by an investment fund to distribute the income generated to its unit holders.

**Diversification:** Holding a variety of investments that typically perform differently from one another.

**Duration:** The duration represents the length of time for which capital is "tied up" in a bond investment. The concept of duration takes account of the time structure of returning cash flows (such as coupon repayments). The average duration of the portfolio is derived from the weighted average duration of the individual securities. The "modified duration" is derived from the duration and provides a measure of the sensitivity of bonds or bond portfolios to interest rate changes.

**Emerging economy or market:** Emerging markets or developing markets – mainly in Asia, Eastern Europe, and Latin America – that are growing quickly, but whose economies and stock markets have not yet reached Western standards.

**Equities:** Securities that represent an equity interest in a company. As a joint owner, the shareholder has rights of participation (voting right, right to information) and rights to assets (right to a share of profits, subscription rights).

**Exchange traded fund (ETF):** An investment fund that is traded like stocks on an exchange. Most ETFs are index funds: they hold the same securities in the same proportions as a certain index.

**Feeder fund:** An investment fund that invests the majority of its assets into a master fund.

**Hedging:** Protecting investments against losses. UBS asset allocation funds and hedged UBS ETFs specifically hedge against exchange rate risks.

**High watermark:** The high watermark is used in connection with the performance fee. The fund manager calculates his or her share of the profits on the basis of the value increment over and above the last peak in the NAV. As a result, the performance fee does not become payable until all losses incurred have been completely recovered.

**High yield bonds:** Bonds issued by borrowers with lower credit ratings. Such bonds offer higher rates of interest, but at the same time there is also a higher risk of default, i.e. that interest payments will not be paid or that the face value will not be repaid.

**Illiquid:** Illiquid assets are those assets that cannot be easily bought, sold, or converted into cash. It may often be impossible to convert the asset to cash until the end of the life of the asset.

**Index:** Indicator of performance on one or more markets. The oldest and best-known stock market index is the Dow Jones. Indexes make it possible to compare the performance of a fund invested in a specific market with the development of that market.

**Index fund:** An investment fund that replicates a chosen stock market index in its stock selection and weightings as exactly as possible.

**Inflation-linked bonds:** An inflation-linked bond provides investors with protection from inflation by linking its principal amount or interest payments to a specific inflation index.

**Investment grade:** Term used to denote securities with ratings of between BBB and AAA, indicating that their credit quality is satisfactory or good.

**Leverage:** With derivative instruments, greater returns can be earned with a comparatively lower capital investment than with an investment in the actual underlying instrument. This effect is called leverage.

**Management style:** Manner in which investment decisions are made to achieve the investment objective (see also active management and passive management).

**Master fund:** Funds invested in respective feeder funds that are then invested into the master fund. The master fund holds the portfolio investments and conducts all trading activity.

**Maturity:** Period from the issue of a bond to its due date or to the premature repayment of the bond. Not to be confused with duration.

**Net asset value (NAV):** Used to describe the value of a company's assets less the value of their liabilities.

Ø – Average.

**Over the counter (OTC):** An over-the-counter financial contract is one that is not traded on an exchange but is "tailor-made" for a client by a financial institution.

**Passive management:** Passive management seeks to attain

# UBS Strategy Xtra Fund Balanced USD P-4%-mdist

performance equal to market or index returns.

**Performance fee:** For non-classical investment funds such as hedge funds, the investor must often pay, in addition to the conventional management fee, a supplementary performance fee in the form of a percentage (e.g. 20%) of the fund's annual increase in value.

**Physical replication:** In physical replication, an ETF invests directly in securities held in the benchmark it is tracking. To do so, the ETF can buy some or all of the securities that make up the replicated index – this method is called full replication and is suitable for liquid indexes.

**Rating:** The measure of a borrower's creditworthiness by special rating agencies such as Standard & Poor's or Moody's. As a rule, UBS bond funds principally invest in bonds issued by prime borrowers.

**Reinvestment:** The possibility of reinvesting the distribution in the same fund. Certain funds offer investors a special reinvestment discount on the issuing price if the annual distribution is reinvested.

**Risk-free rate:** An investment with no chance of default and a known or certain rate of return.

**Share class:** An investment fund can issue several types of share certificates with different criteria. The share certificate classes may differ in the amount of fees, the appropriation of income or the currency of the share certificate class.

**Sharpe ratio:** A measure that expresses how much higher (or lower) a return an investor can expect compared to the risk-free rate of interest (e.g., interest rates on savings accounts) per unit of risk (volatility). The risk-free rate of interest varies from currency to currency.

**Standard deviation:** Statistical measure of the degree to which an individual value in a probability distribution tends to

vary from the mean of the distribution. The greater the degree of dispersion the greater the risk.

**Swing pricing:** Method used to calculate the net asset values of investment funds. This method allows transaction costs arising from subscriptions made by incoming investors and redemptions made by outgoing investors to be borne by the incoming and outgoing investors, rather than existing investors.

**Synthetic replication:** In contrast to physical replication, synthetic replication means that an ETF does not invest directly in the securities held in the benchmark. Instead, it enters into a swap agreement with a counterparty that promises to pay the return on the replicated index to the ETF.

**Total expense ratio (TER):** The ratio of total expense to a fund's average size over an annualized accounting period. Expenses are considered to include all expenses shown in the income account, including management, administration, custody, audit, legal and professional fees.

**Tracking error:** Measure of the deviation of a fund's return compared to the return of a benchmark over a fixed period, expressed as a percentage. The more passively the investment fund is managed, the smaller the tracking error.

**UCITS:** Undertakings for Collective Investment in Transferable Securities. A UCITS fund is an authorized fund that may be sold across all EU countries.

**Volatility:** A measure of the size of short-term changes in the value of an investment.

**Yield to maturity:** Weighted average rate earned by an investor who buys the bond portfolio today at the market price and holds the bond portfolio until maturity, also assuming that all coupon and principal payments will be made on schedule.
