

EUROSE

FLEXIBLE ASSET

Investment objective

The investment objective is to seek to outperform the 20% DJ EUROSTOXX 50 and 80% FTSE MTS Global composite index calculated with dividends and coupons reinvested, over the recommended investment period. This flexible fund seeks to improve the profitability of an investment through active management of equities and bonds. This flexible fund seeks to improve the profitability of an investment by active management of equities and bonds in the Eurozone, in particular by selecting stocks that meet socially responsible investment criteria. It offers an alternative to bonds, convertible bonds and euro funds, but without a capital guarantee.

To achieve its investment objective, the investment strategy is based on active discretionary management.

Portfolio managers comments

With the dual support of the 50bp cut in US key rates and the surprise announcement of the Chinese recovery plan, the markets have resumed their upward trajectory. While the EURO STOXX 50 is approaching its annual highs, the CAC40 is still some way off. The political situation in France continues to give cause for concern, and the budgetary slippage - a 6% deficit by 2024 instead of the 4.4% initially forecast - is not helping. France's borrowing costs are now higher than those of Spain and Portugal.

The fund gained 0% over the month. Its performance since the start of the year stands at 2.86%.

Equities made a negative contribution in September, with Bouygues, STMicroelectronics and TotalEnergies the main detractors. Over the course of the month, the fund strengthened its positions in stocks under offer (Piovan and Unieuro) and in Dassault Systèmes. Conversely, the fund's main holdings were Crédit Agricole, Michelin, Saint-Gobain and Veolia. At the end of September, the fund's net exposure to equities was 19.8%, and the portfolio's main holdings were : TotalEnergies (3.0%), Sanofi (2.1%), BNP Paribas (1.9%), Saint-Gobain (1.7%) and Orange (1.5%). Hedging accounted for 5.1% (EURO STOXX 50 and CAC 40 futures) and was reduced during the month. The financial characteristics of the portfolio show a P/E for 2024 of 10.5X (EURO STOXX 50 at 15.3X), while the dividend yield for 2024 is estimated at 4.3% (EURO STOXX 50 at 3.0%).

On the bond side, the fund maintains a highly selective approach to the primary market, participating in only two transactions in September: Banco Santander 2029 3.25% in senior non-preferred format, and IGT Lottery Holdings 2030 4.25%. Several convertible bonds have been included in the selection, including Voltalia 2025, Soitec 2025 and Voestalpine 2028, which offer attractive credit spreads. In addition, a 2029 senior bond issued by Banca Monte dei Paschi has been added to the portfolio, as the bank has published solid results over the past 18 months. In terms of exits from the portfolio, the theme of tender offers for hybrid bonds was once again prominent, with transactions in EDF and Accor shares.

The environment remains too fraught with uncertainty to accumulate risk. This is why the Fund remains vigilant about the quality of the balance sheets of portfolio companies, well aware that some debt leverage is no longer tolerable today. As at the start of the year, the markets are once again anticipating numerous rate cuts by central banks, and the term premium remains low: in this context, the fund is maintaining a short duration. The bond yield is 3.7%.

Analysis methodology

We develop proprietary models based on our expertise and conviction to add tangible value in the selection of portfolio securities. DNCA's ESG analysis model, Above & Beyond Analysis (ABA), respects this principle and offers a rating that we control the entire construction. Information from companies is the main input to our rating. The methodologies for calculating ESG indicators and our responsible investor and engagement policy are available on our website [by clicking here](#).

⁽¹⁾ The rating out of 10 integrates 4 risks of responsibility: shareholder, environmental, social and societal. Whatever their sector of activity, 24 indicators are evaluated, such as social climate, accounting risks, suppliers, business ethics, energy policy, quality of management.

⁽²⁾ The ABA Matrix combines the Responsibility Risk and the Sustainable Transition exposure of the portfolio. It allows us to map companies to be mapped using a risk/opportunity approach.

⁽³⁾ 1 No poverty. 2 Zero hunger. 3 Good health and well-being. 4 Quality education. 5 Gender equality. 6 Clean water and sanitation. 7 Clean and affordable energy. 8 Decent work and economic growth. 9 Industry, innovation and infrastructure. 10 Reduced inequalities. 11 Sustainable cities and communities. 12 Sustainable consumption and production. 13 Tackling climate change. 14 Aquatic life. 15 Terrestrial life. 16 Peace, justice and effective institutions. 17 Partnerships to achieve the goals.

⁽⁴⁾ 5 transitions based on a long-term perspective of the financing of the economy allow the identification of activities with a positive contribution to sustainable development and to measure the exposure of companies in terms of turnover as well as exposure to the UN Sustainable Development Goals.

*The coverage rate measures the proportion of issuers (equities and corporate bonds) taken into account in the calculation of the extra-financial indicators. This measure is calculated as a % of the net assets adjusted for cash, money market instruments, derivatives and any vehicle outside the scope of "listed equities and corporate bonds".

A summary of investors' rights is available in English at the following link: <https://www.dnca-investments.com/en/regulatory-information>

This product promotes environmental or social characteristics, but does not have as its objective a sustainable investment. It might invest partially in assets that have a sustainable objective, for instance qualified as sustainable according to the EU classification.

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not intend to be consistent with the environmental or social characteristics promoted by the fund.

Glossary

Beta. Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.

Convertible Bond. Hybrid securities that have both bond and equity characteristics. Convertible bonds make periodic interest payments like a bond, but bondholders also get an option to exchange their bonds for a specified number of shares of common stock. Convertible bonds typically carry lower coupon rates, thus reducing the corporation's cost of borrowing.

Correlation coefficient. The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.

Delta. The delta of a position expresses the change in the price of an option when its underlying asset price varies. It corresponds to the derivative of the theoretical value of the option relating to the price of the underlying asset.

Maturity. The time when a bond or other debt instrument is due to for redemption (is due to mature); or the length of time between the issue of such an instrument and the date it is due for redemption (the maturity date).

Sensitivity. The sensitivity of a bond measures the change in its percentage value induced by a given change in interest rates.

Sharpe Ratio. A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).

Sharpe Ratio. The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.

Tracking error. Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.
