Portfolio managers comments

Macro/markets

Buoyed by the election of Donald Trump, global equity markets rose sharply in November. In the United States, the S&P 500 gained 5.7% to close above 6,000 points, while the NASDAQ was up 4.3%. These gains contrasted with a much more moderate rebound in Europe, with the Stoxx 600 up by just 1.0%, although this ended a sequence of 2 consecutive months of declines. Overall, the MSCI ACWI rose by 3.8% over the month.

The month was therefore marked by the election of Donald Trump and the composition of his government. As in 2016, the polls underestimated his ability to mobilise a large electorate. On the strength of this red sweep (joint control of the House of Representatives and the Senate), his programme, deemed inflationary - massive tax cuts, higher tariffs and tougher immigration - should be fully implemented. Against this backdrop, and even if the macroeconomic situation has temporarily taken a back seat, economic activity remains dynamic and is holding steady at healthy levels. The ISM manufacturing index fell to 46.5, but the services index, which accounts for the majority of the economy, rose to 56.0. Inflation is stable at 2.6%, and core inflation remains at 3.3%, showing a slowdown in disinflation, perhaps putting the brakes on the Fed's desire to cut rates in 2025.

This is in stark contrast to Europe, which, in addition to the fact that it could be hit by unfavourable customs measures from the new Trump administration as early as January, is navigating in a political and economic environment that is tense, to say the least. November's data show a deterioration in economic activity and rising inflation, complicating the ECB's position on its rate-cutting cycle. This context is accompanied by a high political risk. In Germany, the sacking of the Finance Minister and the call for a vote of confidence by Olaf Scholz are causing uncertainty, particularly over the 2025 budget. Although, in the longer term, this could unblock the political paralysis if a new, more stable government emerges. In France, instability has persisted since the dissolution of the National Assembly. The cost of borrowing has reached 2.88% over 10 years, reflecting political and budgetary fears. France is now borrowing at a rate close to that of Greece, signalling persistent difficulties. Finally, the Chinese economy is struggling to convince. Retail sales rose from 3.2% to 4.8%, but industrial production slowed slightly to 5.3%, illustrating a hesitant recovery.

Geographically, this new political situation is reflected quite naturally in the outperformance of US equities (+5.7%) to the detriment of all other markets, whether in Asia (-2.2% for the Nikkei, +1.4% for the Shanghai Composite), the emerging markets (-3.7% for the MSCI EM) or Europe (where France clearly underperformed with -1.6% for the CAC compared with +1.0% for the Stoxx 600 and a flat Euro Stoxx). These divergences were amplified by the rise in the dollar (+3.5% against the euro over the month). At sector level, the rotation observed over the last few months away from defensive stocks towards cyclicals has continued and even intensified, with Financials (+6.3%) and Consumer Discretionary (+7.3%) outperforming at the expense of Telecoms (+2.5%), Consumer Durables (+1.9%) and Healthcare (-1.1%). Finally, the Magnificent 7 (the term used to describe the 7 American technology giants Apple, Microsoft, Amazon, Alphabet, Meta, Tesla and NVIDIA) rose by 9.3% in November.

Finally, in relation to this abundant flow of economic and political news, while the end of the earnings publication season played a positive role in the USA, fuelling the rise (71% beat on Q3 earnings, ~4% surprise on average on EPS), it only played a secondary role in Europe, with a disappointing balance sheet in the end. Only 62% of companies published above expectations (beat/miss ratio of 1.6x) for EPS growth down 2% YoY and an average surprise of 2%."

Despite this climate of uncertainty, credit continued to show resilience over the month. Spreads between investment grade and high yield widened and narrowed, offset by lower interest rates. Performance was therefore positive over the month: +1.6% for euro investment grade and +0.7% for euro high yield. In the United States, the market benefited from both a narrowing of spreads and a fall in rates: +1.1% on US investment grade, +1.1% on US high yield. Credit continues to attract new investors, with substantial flows (more than €2bn in investment grade, €637m in high yield). The primary market remains open at a slower pace due to the US elections and Thanksgiving.

Allocation

Alterosa's performance was 0.74% in November, compared with 3.05% for its benchmark index.

At the end of the month, the fund's equity portfolio comprised 32 stocks. The level of Eurostoxx future hedging was maintained at 13.5%. Net equity exposure remains close to 27%.

At the end of the month, bonds represented 52% of the portfolio, with a yield of 3.8% and a duration of 2.8.

Equity portfolio

"Over the month, the main relative outperformers in equities were : Palo Alto Networks (Economic Transition, +14 bps, active weight +1.9%), Deere & Co (Ecological Transition, +13 bps, active weight +0.8%) and Wabtec (Lifestyle Transition, +10 bps, active weight +1.4%). Conversely, the relative worst performers were : Samsung SDI (Ecological Transition, -22 bps, active weight +0.8%), AstraZeneca (Medical Transition, -13 bps, active weight +1.1%) and EDP Renovaveis (Ecological Transition, -11 bps, active weight +0.8%)."

Bond portfolio

Alterosa's bond investments made a positive contribution to performance over the month. Euro-denominated securities performed best, with BBB and BB ratings, as well as senior and subordinated bank debt.

By sector, the biggest contributors to performance were capital goods, healthcare, utilities, banks and the rebounding automotive sector. The weakest contributors were consumer goods, transport, telecoms, property and media.

In terms of issuers, the biggest contributors are Verallia (capital goods, lifestyle transition), Saur (utilities, ecological transition), Stora Enso (basic industries, lifestyle and ecological transition), Intesa Sanpaolo (banking, economic transition) and Knorr-Bremse (automotive, lifestyle transition). The least significant contributors are Biogroup (healthcare, medical transition), Webuild (basic industries, ecological and economic transition), Orange (telecommunications, economic transition), Nexans (capital goods, ecological transition) and SIG Combibloc (capital goods, lifestyle transition).

During the month, we reduced our exposure to Verallia and Saur following our participation in their new primary issue in October. We sold our exposure to Webuild and Orange following the deterioration in their social climate.

We remain confident in the credit market, which still offers attractive yields with limited volatility. Flows are continuing to pour into the market, and the primary market should slow down towards the end of the year.

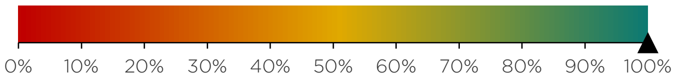
Internal extra-financial analysis

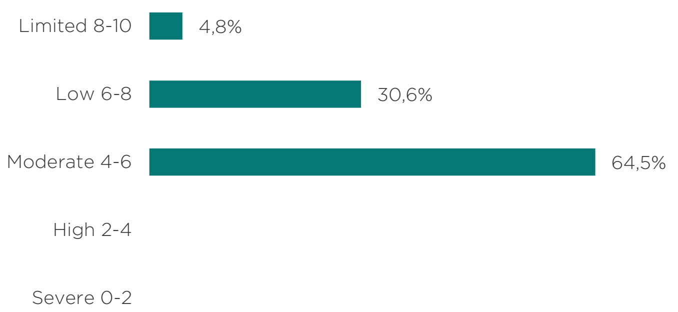
ABA coverage rate+(100%)



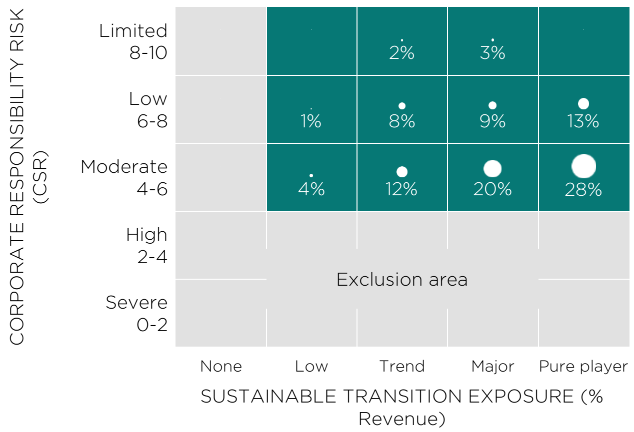
Average Responsibility Score: 5.7/10

Selectivity universe exclusion rate

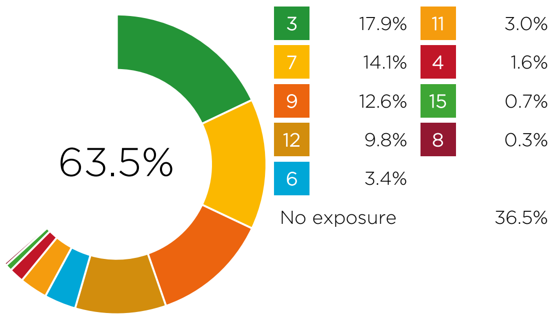
Responsibility risk breakdown(1)



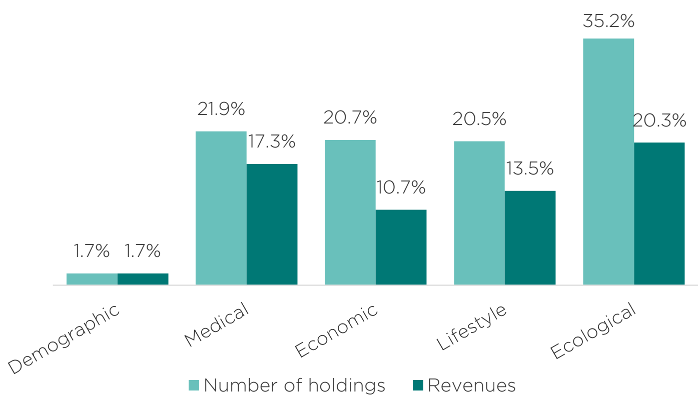
Transition/CSR exposure(2)



SDG's exposure(3) (% of revenues)



Sustainable transitions exposure(4)



Analysis methodology

We develop proprietary models based on our expertise and conviction to add tangible value in the selection of portfolio securities. DNCA's ESG analysis model, Above & Beyond Analysis (ABA), respects this principle and offers a rating that we control the entire construction. Information from companies is the main input to our rating. The methodologies for calculating ESG indicators and our responsible investor and engagement policy are available on our website by clicking here.

(1) The rating out of 10 integrates 4 risks of responsibility: shareholder, environmental, social and societal. Whatever their sector of activity, 24 indicators are evaluated, such as social climate, accounting risks, suppliers, business ethics, energy policy, quality of management.

(2) The ABA Matrix combines the Responsibility Risk and the Sustainable Transition exposure of the portfolio. It allows us to It allows companies to be mapped using a risk/opportunity approach.

(3) 1 No poverty. 2 Zero hunger. 3 Good health and well-being. 4 Quality education. 5 Gender equality. 6 Clean water and sanitation. 7 Clean and affordable energy. 8 Decent work and economic growth. 9 Industry, innovation and infrastructure. 10 Reduced inequalities. 11 Sustainable cities and communities. 12 Sustainable consumption and production. 13 Tackling climate change. 14 Aquatic life. 15 Terrestrial life. 16 Peace, justice and effective institutions. 17 Partnerships to achieve the goals.

(4) 5 transitions based on a long-term perspective of the financing of the economy allow the identification of activities with a positive contribution to sustainable development and to measure the exposure of companies in terms of turnover as well as exposure to the UN Sustainable Development Goals.

+The coverage rate measures the proportion of issuers (equities and corporate bonds) taken into account in the calculation of the extra-financial indicators. This measure is calculated as a % of the net assets adjusted for cash, money market instruments, derivatives and any vehicle outside the scope of "listed equities and corporate bonds".

It should be noted that DNCA Finance changed its non-financial data provider in October 2023 from monitoring negative externalities by the Scope Rating provider to monitoring performance indicators (PAI) by the MSCI provider.
This change of supplier and indicator typology prevents DNCA Finance from producing a 3-year ESG performance comparison. DNCA Finance Committed to produce this historical data from the data available in December 2023.

Legal information

The Sub-Fund has as its objective sustainable investment within the meaning of Article 9 of SFDR. The Sub-Fund is managed taking into consideration responsible and sustainable principles and aims to be target issuers with a significatively exposure of percentage or their revenues to the 17 Sustainable Development Goals of the United Nations.

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not intend to be consistent with the environmental or social characteristics promoted by the fund.

Glossary

Beta. Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.
Convertible Bond. Hybrid securities that have both bond and equity characteristics. Convertible bonds make periodic interest payments like a bond, but bondholders also get an option to exchange their bonds for a specified number of shares of common stock. Convertible bonds typically carry lower coupon rates, thus reducing the corporation's cost of borrowing.
Correlation coefficient. The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.
Delta. The delta of a position expresses the change in the price of an option when its underlying asset price varies. It corresponds to the derivative of the theoretical value of the option relating to the price of the underlying asset.
Maturity. The time when a bond or other debt instrument is due to for redemption (is due to mature); or the length of time between the issue of such an instrument and the date it is due for redemption (the maturity date).
Sensitivity. The sensitivity of a bond measures the change in its percentage value induced by a given change in interest rates.
Sharpe Ratio. A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).
Sharpe Ratio. The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.
Tracking error. Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.
