DNCA INVEST
BEYOND CLIMATE
EUROPEAN EQUITIES SRI

Investment objective

The Sub-Fund seeks to outperform of the following index denominated in Euro: Euro Stoxx NR (Bloomberg ticker: SXXT Index) calculated with dividends net of withholding taxes reinvested, over the recommend investment term. Investors' attention is drawn to the fact that the management style is discretionary and integrates environmental, social / societal and governance (ESG) criteria. The investment strategy is based on a climate strategy which combines the classic requirements of risk and financial return with the low carbon transition requirements in line with the Paris Agreement as signed on 22 April 2016 (the "Paris Agreement").
To achieve its investment objective, the investment strategy is based on active discretionary management.

Portfolio managers comments

Buoyed by the momentum of Donald Trump's election, global equity markets rose sharply in November. In the US, the S&P 500 gained +5.7% to close above 6,000 points, while the NASDAQ was up +4.3%. These gains contrasted with a much more moderate rebound in Europe, with the Stoxx 600 up by just +1.0%, ending a sequence of 2 consecutive months of decline. Overall, the MSCI ACWI rose by +3.8% over the month.

The month was thus marked by the election of Donald Trump and the composition of his government. As in 2016, the polls underestimated his ability to mobilize a large electorate. On the strength of this red sweep (joint control of the House of Representatives and the Senate), his program deemed inflationary - massive tax cuts, higher tariffs and tougher immigration - should be fully implemented. Against this backdrop, and even if macroeconomic conditions have momentarily taken a back seat, economic activity remains buoyant at healthy levels. The ISM manufacturing index fell to 46.5, but the services index, which accounts for the majority of the economy, rose to 56.0. Inflation is stable at 2.6%, and core inflation remains at 3.3%, showing a slowdown in disinflation, perhaps putting the brakes on the Fed's plans for rate cuts in 2025.

This is in stark contrast to Europe, which, in addition to the fact that it could face unfavorable customs measures from the new Trump administration as early as January, is navigating a political and economic environment that is tense, to say the least. November's data show a deterioration in activity and rising inflation, complicating the ECB's position on its rate-cutting cycle. This context is accompanied by a high level of political risk. In Germany, the sacking of the Finance Minister and the call for a vote of confidence by Olaf Scholz are raising uncertainties, particularly over the 2025 budget. Although, in the longer term, this could unblock the political paralysis if a new, more stable government emerges. In France, instability has persisted since the dissolution of the National Assembly. The cost of borrowing has reached 2.88% over 10 years, reflecting political and budgetary fears. France is now borrowing at a rate close to that of Greece, signalling persistent difficulties. Finally, China's economy is struggling to convince. Retail sales rose from 3.2% to 4.8%, but industrial production slowed slightly to 5.3%, illustrating a hesitant recovery.

Geographically, this new political situation is reflected quite naturally in the outperformance of US equities (+5.7%), to the detriment of all other markets, whether in Asia (-2.2% for the Nikkei, +1.4% for the Shanghai Composite), emerging markets (-3.7% for the MSCI EM) or Europe (where France clearly underperforms, with -1.6% for the CAC versus +1.0% for the Stoxx 600 and a flat Euro Stoxx). These disparities were amplified by the dollar's rise (+3.5% against the euro over the month). At sector level, the rotation observed over the past few months away from defensive stocks towards cyclicals continued and even intensified, with Financials (+6.3%) and Consumer Discretionary (+7.3%) outperforming at the expense of Telecoms (+2.5%), Consumer Durables (+1.9%) and Healthcare (-1.1%). Finally, the Magnificent 7 (the term used to designate the 7 American technology giants Apple, Microsoft, Amazon, Alphabet, Meta, Tesla and NVIDIA) rose by +9.3% in November.

Finally, compared to this abundant flow of economic and political news, the end of the earnings season played only a secondary role in Europe, with a disappointing balance sheet in the end. Only 41% of companies came out above expectations on sales (beat/miss ratio of 1.0x low compared with the historical average), with flat YoY growth and a surprise level of just 1%. On EPS, 62% of companies reported above expectations (beat/miss ratio of 1.6x), with EPS growth down 2% YoY and an average surprise of 2%. As in the previous quarter, companies in the Health/Pharma, Utilities and Financials sectors reported well overall, with positive earnings revisions, while the Energy, Auto and Luxury Goods sectors (not in the portfolio) struggled.

In November, the fund posted a performance of -2.61%, compared with 0.03% for its Euro Stoxx NT benchmark.

Over the month, the main relative outperformances of the stocks in the portfolio (versus Euro Stoxx) were : Vaisala (Ecological Transition, +19 bps, active weight +2.3%), Dassault Systèmes (Lifestyle & Medical Transition, +14 bps, active weight +3.9%), Infineon Technologies (Ecological & Lifestyle Transition, +11 bps, active weight +1.8%), SSE (Ecological Transition, +7 bps, active weight +2.2%) and Terna (Ecological Transition, +6 bps, +3.3%). Conversely, the worst performers in terms of performance were : EDPR (Ecological Transition, -35 bps, active weight +3.1%), NIBE (Ecological Transition, -32 bps, active weight +3.3%), Crédit Agricole (Economic Transition, -31 bps, active weight +2.9%), Spie (Ecological Transition, -29 bps, active weight +2.8%) and Séché Environnement (Ecological Transition, -28 bps, active weight +2.3%).

Among the main movements, we strengthened our positions in Spie (participation in the capital increase), Knorr-Bremse, SSE and ASML. These moves were financed by write-downs on Stora Enso and Iberdrola.

At the end of the month, the portfolio comprised 34 stocks. The fund's main convictions revolve around the following stocks: Iberdrola (Ecological Transition, > 5.5%), Enel (Ecological Transition, > 5%), Dassault Systèmes (Medical Transition & Lifestyle, > 4%), Schneider Electric (Ecological Transition, > 4%) and ASML (Ecological Transition & Lifestyle, > 4%). Overall, the fund's top 10 holdings represent almost 43% of net assets.

Donald Trump's election has led to a general mistrust of stocks linked to renewable energies (-5.4% for the S&P Global Clean Energy index in November), which penalized the portfolio in November. On this point, our central scenario is not that of a pure and simple cancellation of all the measures of the IRA (Inflation Reduction Act) plan, notably in view of the local job pools that this plan has contributed to in the United States. Instead, we are counting on targeted cancellations of certain symbolic and costly niches of the IRA plan, such as subsidies for electric vehicles, offshore wind power and hydrogen.

Over the next few weeks, as we await Donald Trump's official inauguration in January, macro factors could temporarily take a back seat, provided that recent trends in activity and inflation continue. Against this backdrop, announcements of the new administration's future tax and trade measures, on the one hand, and political developments in Europe (and France in particular), on the other, will be the main drivers for equity markets in the weeks ahead.

Analysis methodology

We develop proprietary models based on our expertise and conviction to add tangible value in the selection of portfolio securities. DNCA's ESG analysis model, Above & Beyond Analysis (ABA), respects this principle and offers a rating that we control the entire construction. Information from companies is the main input to our rating. The methodologies for calculating ESG indicators and our responsible investor and engagement policy are available on our website by clicking here.

(1) The rating out of 10 integrates 4 risks of responsibility: shareholder, environmental, social and societal. Whatever their sector of activity, 24 indicators are evaluated, such as social climate, accounting risks, suppliers, business ethics, energy policy, quality of management.

(2) The ABA Matrix combines the Responsibility Risk and the Sustainable Transition exposure of the portfolio. It allows us to It allows companies to be mapped using a risk/opportunity approach.

(3) 1 No poverty. 2 Zero hunger. 3 Good health and well-being. 4 Quality education. 5 Gender equality. 6 Clean water and sanitation. 7 Clean and affordable energy. 8 Decent work and economic growth. 9 Industry, innovation and infrastructure. 10 Reduced inequalities. 11 Sustainable cities and communities. 12 Sustainable consumption and production. 13 Tackling climate change. 14 Aquatic life. 15 Terrestrial life. 16 Peace, justice and effective institutions. 17 Partnerships to achieve the goals.

(4) 5 transitions based on a long-term perspective of the financing of the economy allow the identification of activities with a positive contribution to sustainable development and to measure the exposure of companies in terms of turnover as well as exposure to the UN Sustainable Development Goals.

+The coverage rate measures the proportion of issuers (equities and corporate bonds) taken into account in the calculation of the extra-financial indicators. This measure is calculated as a % of the net assets adjusted for cash, money market instruments, derivatives and any vehicle outside the scope of "listed equities and corporate bonds".

A summary of investors' rights is available in English at the following link: https://www.dnca-investments.com/en/regulatory-information

The Sub-Fund has as its objective sustainable investment within the meaning of Article 9 of SFDR. The Sub-Fund aims to align the economy on a path of at least 2 degrees. This objective is materialized by an average decrease of the portfolio carbon intensity of at least 2,5% each year by comparing the carbon intensity of each consolidated company in the Sub-Fund with the carbon intensity of the previous year. In addition, the investment strategy is oriented towards a contributive economy to the climate issues resulting in avoided CO_2 emissions greater than the induced CO_2 emissions (scope 1 and 2).

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not intend to be consistent with the environmental or social characteristics promoted by the fund.

Glossary

Beta. Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.
Correlation coefficient. The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.
Dividend yield. Annual dividends per share / Price per share
EV (Enterprise Value). Market value of common stock + market value of preferred equity + market value of debt + minority interest - cash and investments.
ND/EBITDA (Net Debt / EBITDA). A measurement of leverage, calculated as a company's interest-bearing liabilities minus cash or cash equivalents, divided by its EBITDA. The net debt to EBITDA ratio is a debt ratio that shows how many years it would take for a company to pay back its debt if net debt and EBITDA are held constant.
P/B. The Price to Book Ratio is the ratio of the market value of equity (market capitalisation) to its book value. It is used to compare the market valuation of a company with its book value.
P/CF (Share price/Cash Flow per Share). The price-to-cash-flow ratio is an indicator of a stock’s valuation.
PER (Price Earnings Ratio). A company's share price divided by the amount of profits it makes for each share in a 12-month period. PE ratios are normally calculated on the base of all the profit made in the period, whether or not the profit is paid out to shareholders in that period.
ROE (Return On Equity). The amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested.
Sharpe Ratio. A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).
Sharpe Ratio. The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.
Tracking error. Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.
