Risk Disclaimer

This current risk profile is based on historical data and may not be a reliable indication of the future risk profile of the Sub-Fund.

The risk category shown is not guaranteed and may shift over time.

The lowest category, which corresponds to Number 1, cannot be regarded as being risk-free.

The Sub-Fund does not provide any capital guarantee or asset protection measures.

Why is this Sub-Fund in this Category?

The Sub-Fund is a high risk vehicle which aims to provide a long-term capital growth by investing in equities or equity related securities issued in Russia and other FSU Countries. Therefore its risk/reward profile corresponds to the underlying volatility of the Russian equity market which is the highest risk category of the SRRI scale.

Are there any other particular Risks?

Risks that could affect fund performance and are not necessarily fully reflected in the risk and reward rating include:

- Liquidity risks: The Sub-Fund may invest part of its assets in less liquid securities. Those are securities that cannot easily be sold or exchanged for cash without a substantial loss in value in certain market conditions. Those securities also cannot be sold quickly because of a lack of ready and willing investors or speculators to purchase the asset.

- Counterparty risks: The Sub-Fund can conclude various transactions with contractual partners. If a contractual partner becomes insolvent, it can no longer or can only partly settle unpaid debts owed to the Sub-Fund.

- Credit risks: The Sub-Fund may invest a portion of its assets in debt securities. The issuers of these debt securities may become insolvent, which will mean that the securities will lose all or some of their value.

- Risks from the use of derivatives: The Sub-Fund may use financial derivatives instruments which may result in the Sub-Fund being leveraged and may result in material fluctuations in the value of the Sub-Fund. Leverage on certain types of transactions including derivatives may impair the Sub-Fund's liquidity, cause it to liquidate positions at unfavourable times or otherwise cause the Sub-Fund not to achieve its intended objective.

Leverage occurs when the economic exposure created by the use of derivatives is greater than the amount invested resulting in the Sub-Fund being exposed to a greater loss than the initial investment.

- Operational risks: The Sub-Fund may fall victim to fraud or criminal acts. It may suffer losses as a result of misunderstandings or mistakes by employees of the Management Company or by external third parties or may be damaged by external events, such as natural disasters.
