Fund Portrait

The JSS Bond - USD High Yield aims to deliver the highest total return. To achieve this, the sub-fund invests globally (including in emerging markets) in USD-denominated debt securities with non-investment grade rating. A non-investment grade rating is understood to be a rating lower than BBB- (Standard & Poor's) or Baa3 (Moody's). "Emerging markets" are generally defined as the markets of countries that are developing into modern industrial economies and therefore have high growth potential but also increased risk. The sub-fund may also invest up to 15%, directly or indirectly, in different equity securities such as ordinary and preferred shares.

Review

The high yield bond market returned 1.38% in July, with the banking, pharmaceuticals, and brokerage/asset managers/exchanges sectors generating the strongest returns. By credit rating, the BB-rated sector returned 1.10%, the B-rated sector returned 1.45% and the CCC-rated sector returned 2.11% for the month. Corporate credit quality remains solid, but higher interest rates and a slowing economy are pressuring some balance sheets. According to JP Morgan, the LTM par-weighted US high yield default rate decreased to 1.18%, which is the lowest since January and significantly lower than the long-term average. The high yield distressed ratio (bonds trading less than 50% of par value), a leading indicator of defaults, decreased by 50bps to 1.80% of the index. High yield new issuance activity slowed in July to only the second lightest month this year.

Outlook

Underlying US economic fundamentals have slowed, yet a robust job market continues to provide support to the economy and fuel optimism that a recession will be avoided. However, persistently high, yet slowing, inflation, along with the Federal Reserve's rate hikes are negatively impacting certain sectors of the US economy, such as manufacturing and lower-income consumers.
