² YTD: year-to-date (since beginning of the year)

Global stocks recovered from a sharp sell-off at the start of August to end the month at a record high, while fixed income benefited from widespread expectations of imminent rate cuts. However, investors still face several uncertainties, including the upcoming US elections and unpredictability in the Middle East.

Monthly performance

In August the fund performed positively with 0.9%. After a severe setback early in the month, global stocks recovered and even approached their all-time highs. Bonds also gained ground, especially those issued by the US.

YTD performance

YTD as of the end of August, the fund has delivered a positive performance of 4.8%. All asset classes have made positive contributions to performance. The main drivers in equities are euro and global opportunity stocks, as well as global high-dividend and global sustainable equities. In the fixed income space, corporates, global high-grade and emerging market (EM) government bonds have been the main drivers of the positive performance in the year to date.

Performance contributors

Positive contributions came from both equities and fixed income. In equities, European and high-dividend stocks were the main drivers, whereas in fixed income high-grade and EM government bonds were the largest contributors. Alternative strategies such as hedge funds and risk parity also enhanced performance.

Performance detractors

There were no significant detractors in August.

Current investment strategy

We maintained our respective overweights in EM and Australian government bonds at the expense of US high-grade and Italian government bonds. We remain overweight in IT equities. Currency-wise, we increased our positions in the EUR, CHF, GBP and AUD at the expense of the USD. Within commodities, we reduced our overweight in gold.

Risks

The fund invests in bonds of varying credit quality, money market securities and equities on a global basis, as well as in alternative forms of investment such as hedge funds. It may therefore be subject to fluctuations in value. The fund may use derivatives which can reduce investment risk or give rise to additional risks (inter alia the counterparty risk). The fund can invest in less liquid assets that may be difficult to sell in the case of distressed markets. It therefore cannot be ruled out that the daily issue and redemption of fund units may be suspended temporarily. The value of a unit may fall below the purchase price. This requires an elevated risk tolerance and capacity. Every fund reveals specific risks, a description of these risks can be found in the prospectus.
