## What is this product?

### Type

This product is a share of an investment company qualifying as an undertaking for collective investment in transferable securities (UCITS).

### Term

This sub-fund has no maturity date. However, the board of directors may decide to close the sub-fund under certain circumstances.

### Objectives

Facilitate the access to emerging or developing financial markets by seeking long term capital growth.

At least two-thirds of the sub-fund will be invested in shares of companies in emerging or developing countries, whether in Latin America, Asia (excluding Japan), Eastern Europe, the Middle East or Africa. If the market in an emerging or developing country cannot be considered as regulated, investments in this market are limited to 10% of net assets of the sub-fund.

For the remaining third of net assets, the sub-fund may also invest in shares in companies from countries other than those listed above.

The sub-fund may invest up to 10% of its net assets in units of UCITS or other UCIs.

Furthermore, the sub-fund may hold cash on an ancillary and temporary basis and may also, within legal limits, use derivative products to hedge or optimise portfolio exposure.

**Benchmark:** The portfolio is actively managed on a discretionary basis with reference to a benchmark. While the product compares its performance against the MSCI Daily TR Net Emerging Markets (NDUEEGF Index), it does not try to replicate this benchmark and freely selects the securities that it invests in. The deviation with this benchmark can be significant.

### Intended retail investor

The sub-fund is suitable for all types of investors with a medium-term investment horizon and at least basic knowledge of financial instruments that can withstand potential losses.

# What are the risks and what could I get in return?

## Risk indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact our capacity to pay you.

**Be aware of currency risk.** You may receive payments in a currency that differs from your reference currency, so the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

The sub-fund is also exposed to the following materially relevant risks that are not included in the summary risk indicator:  
Emerging markets risk.

This product does not include any protection from future market performance so you could lose some or all of your investment.

If we are not able to pay you what is owed, you could lose your entire investment.

# What happens if Mediobanca Management Company S.A. is unable to pay out?

If we are not able to pay you out what we owe you, you are not covered by any national compensation or guarantee scheme. To protect you, the assets are held with a separate company, the depositary Banque de Luxembourg. Should we default, the investments are liquidated and the proceeds are distributed to the investors. In the worst case, however, you could lose your entire investment.

## What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

### Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed:

- In the first year you would get back the amount that you invested (0% annual return). For the other holding period we have assumed the product performs as shown in the moderate scenario
- 10.000 USD is invested

	If you exit after 1 year	If you exit after 5 years
<b>Total costs</b>	514 USD	2.237 USD
Annual cost impact (*)	5,1 %	3,6 % each year

(\*) This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at the recommended holding period your average return per year is projected to be 7,6% before costs and 4,1% after costs.

We may share part of the costs with the person selling you the product to cover the services they provide to you. They will inform you of the amount.
